## Clinical Trial Supplies Market Overview

The pharmaceutical and biopharmaceutical sector is one among the largest R&D spenders globally. Within the last decade, the R&D expenditure of pharmaceutical and biopharmaceutical companies has risen considerably. This is often expected to guide to an increase within the number of clinical trials conducted globally. Consistent with the Pharmaceutical Research and manufacturers of America (PhRMA), PhRMA members have invested significantly in drug development efforts. Companies within the market are actively looking to support R&D efforts. An extra increase in R&D spending within the coming years will significantly boost drug discovery and development activities, thus driving the demand for clinical test supplies.

Drug discovery and development involve high costs because of the high attrition rate of drug candidates in development. Since R&D for a few rare diseases is extremely challenging and requires a selected group of individuals to conduct a clinical test, drug R&D processes are often at risk of failure.
