

IAQ Distribution Encourages Focus on Indoor Air Quality Over Mask Disputes

Letters to Virginia Governor and School Leaders Present Solutions

SAN DIEGO, CA, UNITED STATES, January 21, 2022 /EINPresswire.com/ -- [IAQ Distribution](#), a provider of sustainable, leading-edge energy and indoor air quality solutions, today released letters it sent to Virginia Governor, Glenn Youngkin and leaders of schools throughout the Commonwealth, including those challenging the new Executive Order designed to allow parents to decide if their children will wear masks in Virginia.

“Students, faculty, and staff within Virginia schools will be breathing easier when benefitting from the best possible indoor air quality,” explained Chris Fall, President of IAQ Distribution. The technology we are offering Virginia schools provides the highest level of room-based air purification and disinfection available anywhere. The disagreements over mask mandates become moot in an environment where the air is disinfected in a sub-second timeframe.”

“

The disagreements over mask mandates become moot in an environment where the air is disinfected in a sub-second timeframe.”

Chris Fall

In the letter to Governor Youngkin, Fall wrote in part:

“...While the conversations about masks remain important,

better solutions to protect everyone who enters a school building from airborne pathogens - including coronavirus are available. As an exclusive distributor of WellAir products, we provide long-term solutions for combatting harmful pathogens, deactivating volatile organic compounds and pollen, killing all airborne microorganisms on contact. It is important to note that on average, we spend 90% of our time indoors!...”

In a letter to Superintendents of School Districts, Fall wrote in part:

"...The technology deployed by IAQ Distribution eliminates 99.99% of the SARS-CoV-2 virus within sub-seconds. As an exclusive distributor of WellAir products, we alleviate many concerns about possible school closures, vaccination requirements, and mask mandates which become much less significant once deploying our products..."

"With growing uncertainty over COVID-19 variants and related discussions about possible school closures, mask mandates, vaccination decisions, etc., we are grateful for the opportunity to provide safety assurances to schools, businesses, and other entities, nationwide", Fall said. "We hope that discussions about indoor air quality can resolve the disputes over mask mandates – and bring focus to what will truly protect students – indoor air quality."

Governor Youngkin Letter

The mask mandate situation in Virginia schools interests the IAQ Distribution team immensely. Listening to parents and addressing their concerns is admirable. We know the health and safety of students are a top priority for you and your Administration. We can help in this endeavor.

While the conversations about masks remain important, better solutions to protect everyone who enters a school building from airborne pathogens - including coronavirus are available. As an exclusive distributor of WellAir products, we provide long-term solutions for combatting harmful pathogens, deactivating volatile organic compounds and pollen, killing all airborne microorganisms on contact. It is important to note that on average, we spend 90% of our time indoors!

At IAQ Distribution, we provide technology to protect indoor air quality for thousands of classrooms, businesses, and other buildings. With our products deployed, you can avoid exposure to airborne viruses and bacteria in classrooms and state offices.

The technology deployed by IAQ Distribution eliminates 99.99% of the SARS-CoV-2 virus within sub-seconds.

Enclosed here is a letter we sent to several local school leaders who voiced opposition to your recent Executive Order.

As we suggest to school leaders, productive dialogue about protecting Virginia school indoor air quality is beneficial. A continued back and forth about mask mandates fails students and parents. We welcome the opportunity to facilitate productive discussions and demonstrate our products.

With our products operating, indoor environments throughout the Commonwealth will be safer.

I will contact your office in the coming days. Of course, we are happy to follow up with your team at your direction. Please feel encouraged to contact me in the meantime.

School Superintendent Letter

The mask mandate situation in Virginia schools interests the IAQ Distribution team immensely. We know the health and safety of students, faculty, visitors, and employees are a top priority for you and your team. Further, we understand the health concerns that students, teachers, and parents share. We work closely with school leaders throughout the United States to provide solutions that we know can become a breath of fresh air for all schools throughout the Commonwealth.

We are writing to share a better solution to protect everyone who enters a school building from airborne pathogens - including coronavirus.

At IAQ Distribution, we provide technology to protect indoor air quality for thousands of classrooms, businesses, and other buildings. With our products deployed, you can avoid exposure to airborne viruses and bacteria in classrooms and other protected campus facilities.

The technology deployed by IAQ Distribution eliminates 99.99% of the SARS-CoV-2 virus within sub-seconds. As an exclusive distributor of WellAir products, we alleviate many concerns about possible school closures, vaccination requirements, and mask mandates which become much less significant once deploying our products.

WellAir products provide a long-term solution for combatting harmful pathogens, deactivating volatile organic compounds and pollen, killing all airborne microorganisms on contact. Because we spend an average of 90% of our lives indoors, it is imperative that we take indoor air quality seriously.

As more school leaders realize the effectiveness of IAQ Distribution products and many are reimbursable through FEMA Emergency Funds, procuring the technology becomes an immediate priority. The Coronavirus Response and Relief Supplemental Appropriations Act (specifically the Elementary and Secondary School Emergency Relief Fund) provides resources for schools to procure this technology.

Discussions about masks and parent choice remain top of mind. However, there is no substitute for the protections offered by taking control of your indoor air quality.

I will contact your office later this week to see if we can set up a demonstration. I am also sharing this letter with Governor Youngkin. Perhaps instead of a continued back and forth about masks, productive dialogue about protecting Virginia school indoor air quality can arise. We welcome

the opportunity to facilitate.

With our products operating, your indoor environment will be safer. Please feel encouraged to contact me in the meantime.
