“

COVID-19 has created a grave situation and affected many companies, both negative and positive way. However, the bike camera market is most affected by the pandemic.”

Roshan Deshmukh

Surge in advanced technology, increase in smart gadgets, rise in disposable income, and surge in the usage of social media are the drivers that lead the global bike camera market to new heights. Further, an increase in recreational activities like bike racing and increase in the population of travelers who like to go on trips on bike and make videos or documentary can be the factors that drive the growth of the bike camera market. Despite this, some factors restrains the growth of the global bike camera market, such as, increased usage of smartphones, an increase in

the camera technology, and popularities of alternative products. However, improvement in the camera resolution and its designs can create a growth opportunity for the bike camera market.

Moreover, concession in the price can boost the growth of the global market.

Camera manufacturers are focused on improving their products so that they can compete with new smart gadgets. Companies have increased the bike camera's features to make it more attractive for consumers to buy.

These bike cameras are for outdoor films, but they can face competition with an increase in the usage of smartphones and the development of mini wireless Wi-Fi cameras. So, companies should make development in the designs and features to survive in the long run.
