

Capsule Endoscopy System Market Qualitative Insights on Application & Outlook by Size, Share, Future Growth

Capsule Endoscopy System Market report, published by Allied Market Research, forecasts that the global market is expected to garner \$399.7 million by 2020.

PORTLAND, OREGON, UNITED STATES, January 25, 2022

/EINPresswire.com/ -- Capsule endoscopy is an advanced non-invasive technique that uses wireless disposable video capsule, workstations and recorders for the diagnosis of gastrointestinal disorders such as peptic ulcers, Crohn's disease, obscure gastrointestinal bleeding (OGB) among others. The capsule aid in capturing images, which are transmitted to the recorders and analyzed through workstations and software.

Capsule endoscopy would gradually replace conventional gastrointestinal monitoring techniques, largely due to the non-invasiveness and convenience. Increasing popularity of varied capsule types such as small bowel, oesophagus and colon, growing aging population and rising incidences of gastrointestinal disorders, are some of the key factors that would largely drive the market growth. On the other hand, unclear reimbursement policies, stringent regulations and high cost of capsule endoscopy systems, would hamper the market growth.
