

# Liongard Extends Its Data & Automation Platform to Windows Workstations with the Launch of Endpoint Visibility

*New capabilities unify Windows Workstation, Windows Server and Linux Server information with data across the entire IT stack.*

HOUSTON, TEXAS, UNITED STATES, February 1, 2022 /EINPresswire.com/ -- Liongard, an automation platform for managed services providers (MSPs), announced today the launch of Endpoint Visibility, offering greater access to mission-critical data and insights that IT service providers need

to run their businesses. This new offering advances Liongard's vision to deliver unified visibility across the modern IT stack by extending to the endpoint. Endpoint Visibility combines Windows Workstation (Windows 10 & 11 laptops, desktops and tablets), Windows Server and Linux Server information with data from all the systems MSPs manage, all in one place.

“

Our new Endpoint Visibility offering gives Liongard Partners a distinct competitive advantage over MSPs that don't have the same level of visibility.”

*Joe Alapat, co-founder and CEO for Liongard*

Liongard co-founder and Chief Executive Officer, Joe Alapat, explains, “Direct insight into Windows Workstations as well as Windows and Linux Servers is more critical than ever. End-users are regularly interacting with these systems. In today's world, where employees can work from anywhere in the world, companies still expect the same level of connectivity, security and support from their MSP. Our new Endpoint Visibility offering gives Liongard Partners a distinct competitive advantage over MSPs that don't have the same level of visibility.”

Endpoint Visibility Inspectors capture details about hardware, software, network connectivity, security, patch status and antivirus, and operate in a least-privilege model. This is critical data that MSPs need at their fingertips to quickly resolve user requests, ensure their customers are

secure and keep their antivirus up to date. This, along with the 70+ other Integrations that Liongard delivers, is available as query-able, reportable and historically auditable data going back up to 18 months. With the addition of Endpoint Visibility to Liongard's already best-in-class platform, MSPs have access to the most comprehensive data visibility tool in the industry, delivering more value to their customers.

MSPs continue to face new and different challenges. Supporting the "work from anywhere" environment, securing their customers against the rise in cybercrime and handling the increasing number of systems they manage are just a few. Liongard provides a streamlined, unified platform that helps MSPs navigate these complex systems and will continue to evolve to support service providers.
