

Gastrointestinal Drugs Market Invests In Oral Capsules For Making Effective Drugs

The Business Research Company's Gastrointestinal Drugs Global Market Report 2022 – Market Size, Trends, And Global Forecast 2022-2026

LONDON, GREATER LONDON, UK, January 28, 2022 /EINPresswire.com/ --

Major companies in the gastrointestinal drug industry are investing in making oral capsules of macromolecular drugs for gastrointestinal diseases for making the drug more effective.

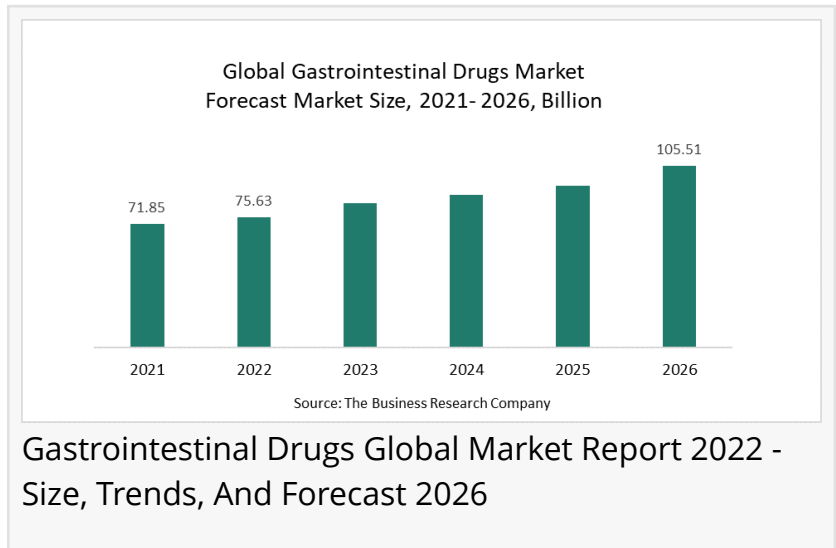

Macromolecular drugs, such as peptides, proteins, and antibodies, form a new class of drugs which can treat diseases of the gastrointestinal tract, such as inflammatory bowel disease. These macromolecular drugs are usually injected and only a fraction of the administered dose reaches the disease sites in the gastrointestinal tract. Thus, major companies such as Eli Lilly have been increasingly investing in making oral capsules for macromolecular drugs. The company invested \$5 million to enter into a collaboration with Entrega to study the oral delivery of complex molecules, such as peptides to combat gastrointestinal diseases.

North America was the largest region in the global gastrointestinal drugs market in 2021. The Middle East is expected to be the fastest growing region in the forecast period. The regions covered in the gastrointestinal drugs market report are Asia-Pacific, Western Europe, Eastern Europe, North America, South America, Middle East and Africa.
