V2X communication is described as vehicle-to-vehicle communication in which any vehicle can

respond to a communication provided by another vehicle. It's essentially a vehicle-to-infrastructure communication, with a vehicle referring to any object on or near a roadway that may or may not be influenced by the car in question. This implies that, in addition to the basic radio signals that all cars use to communicate with one another, there are a variety of alternative communication technologies. An automotive GPS navigation system, for example, sends an analogue signal over the internet to a computer or other source of data, which turns it into a meaningful digital signal. Digital transmissions are far more powerful and survive much longer than analogue signals.

Key players in the V2X market include: Continental AG, Volkswagen AG, Toyota Motor Corporation, General Motors Company, Qualcomm, NXP Semiconductors N.V., Robert Bosch GmbH, Tomtom NV, Savari Inc., Cisco Systems Inc., Infineon Technologies AG, and Denso Corporation.

Increasing road safety regulations due to growing road accidents are predominantly fueling the market growth of V2X Communication. According to the World Health Organization, every year the lives of approximately 1.35 million people are cut short as a result of a road traffic crash. Between 20 and 50 million more people suffer non-fatal injuries, with many incurring a disability as a result of their injury. More than 90% of road traffic deaths occur in low- and middle-income countries. Implementation of the V2X communication enhance road safety and also driving experience. Thus growing demand for safety and security features in automobiles is further projected to foster the market growth of V2X Communication.

The Asia Pacific is expected to gain significant growth over the forecast period and this is attributed to the expanding automotive industry in the region. According to the India Brand Equity Foundation, India became the fourth largest auto market in 2019 displacing Germany with about 3.99 million units sold in the passenger and commercial vehicles categories. India is expected to displace Japan as the third-largest auto market by 2021. Domestic automobile production increased at 2.36% CAGR during 2016-2020 with 26.36 million vehicles being manufactured in the country in 2020.
