Essential tremor is a neurological disorder that causes involuntary, rhythmic shaking. It can make doing simple tasks hard. Essential tremors affect 41 million individuals globally. One can be diagnosed with essential tremors at any age, the prevalence of essential tremors increases with age. They are most common in population of age 40 years and above. Essential tremors are, however, not life-threatening and most individuals can live regular lives even with the tremors. They are traditionally considered as benign, essential tremors can induce social embarrassment and disabilities. Patients can have a hard time doing everyday things like dressing, eating, writing etc. Eventually the tremors can in some cases become severe and can cause disabilities. Covid-19 has caused drastic changes in the economy. With most industries closed their operation sales have declined globally. Healthcare sector has faced the same dilemma since all non-essential treatments were closed as hospitals made their way for the increasing number of

covid patients. The [essential tremor treatment market](#) is also hit due to this lockdown, however some covid cases have also reported neurological symptoms. In a study performed on covid-19 patients in Wuhan, China, 36.4% of the total patients had neurological symptoms and 45.5% of the patients with severe symptoms showed neurological symptoms. The symptoms observed in the central nervous system (CNS) include dizziness, impaired consciousness, headache, acute cerebrovascular disease, and ataxia. Another study from England reported 153 unique neurological cases in Covid19 patients.

Based on type, the essential tremor treatment market is segmented into NBI-640756, SAGE-217, Sepranolone and Others. NBI-640756 by Neurocrine Biosciences has successfully completed their phase I trial on up to 32 healthy volunteers. The product shows promise once launched in the market. More than 5% of the world population is affected by ET and additionally, 50-60% of essential tremor patients have a close relative also effected by ET. Thus, ET can be inherited via an autosomal dominant gene. SAGE-217 from SAGE therapeutics and Sepranolone are other orally consumable drug for essential tremor treatment.
