

BitcoinZ (BTCZ) is now Listed in WhiteBIT, a Top35 Cryptocurrency Exchange & becomes one of the hottest crypto of 2022

BitcoinZ (BTCZ) had a surprise listing in WhiteBIT, a top35 and fast growing #Cryptocurrency Exchange and becomes one of the hottest crypto of the New Year

LONDON, LONDON, UK, February 3, 2022 /EINPresswire.com/ -- BITCOINZ is now listed in WhiteBIT Exchange with USDT and BTC trading pairs.

People who wish to register in WhiteBIT exchange can use [this invitation from the BITCOINZ Community](#).

Why WhiteBIT?

“

BitcoinZ with its fair launch & pure crypto fundamentals (no premine, 100% PoW) is completely immune to scams and “rug pulls”. Because there wasn’t any founder allocating any coins to his addresses”

BITCOINZ Community

WhiteBIT is one of the top35 exchanges with more than half a billion \$ daily volume, presence in 190+ countries, 2 million users and 400 trading pairs.

In addition it is a very fast growing exchange, climbing in higher positions in the lists of the best exchanges, during the last 3 years.

WhiteBIT is based in Esthonia and it is a licensed crypto CEX supporting many different payment methods. Deposits and withdrawals are possible with Visa and

MasterCard, as well as Advcash, Qiwi, Mercury, Geo-Pay, Interkassa, monobank and Perfect Money.

The fact that fiat currency deposits are permitted also makes this exchange an “entry-level

exchange”, meaning an exchange where new crypto investors can take their first steps into the exciting crypto world.

At last but not least, this trading platform stores 96% of all assets in cold storage. As with most other exchanges, the user can also enable two factor authentication to log in. There are also IP-detection features, biometrics confirmation and more. All in all, WhiteBIT seems to focus on security.

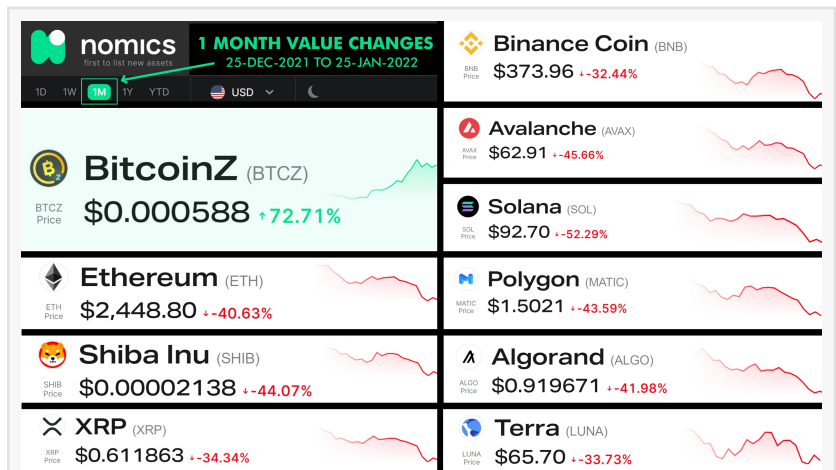

Positive Reviews

Most people in crypto possibly already know that building a good name in the crypto exchange industry is not the easier thing.

Many clients don't understand how to use their crypto assets. Or there are fraudulent people who write negative reviews in order to advertise “specialized services in recovering funds” etc and all these result in many negative reviews even for popular exchanges like Binance or Kucoin.

Despite this fact, WhiteBIT makes it to be among the top performers in the most reviewing platforms like TrustPilot or CryptocurrencyExchanges. At the same time it enjoys top rated reviews for its apple or android apps. These complete the image of a reputable exchange that can really partner with a pure cryptocurrency project like BITCOINZ and help it jump to the next level.

What about BITCOINZ ? Why it is has this impressive uptrend for weeks even during a general cryptocurrency bear market ?

BITCOINZ skyrockets while DeFi and tokens slump during the last month

Invitation to WhiteBIT exchange by BITCOINZ

THE FIVE PILLARS OF A TRUE CRYPTO		THE FLAWS THAT CAME UP	
1	The coins are not issued or controlled by any central authority	1	Low scalability as it has unmanageable slow block time
2	Proof of work : people support the network & gain rewards	2	Low max supply that is not enough to cover the demand
3	Fair launch & rules No premine No ICO sales	3	Very high fees that constantly increase
4	Fixed maximum supply & specified block rewards plan	4	Network dominated by ASIC miners blocking simple PC
5	Public access to the blockchain history of its	5	It never provided any real privacy option for transactions
1	Community Driven. No need to trust 3rd parties like banks	1	Unable to support many transactions & with low speed
2	Everyone can participate with the mining procedure	2	Difficult long non integer prices that are not friendly
3	Decentralized coin distribution & Equality for all	3	Totally unsuitable for transfer of small sums
4	Deflationary asset & reduced coin emission over time	4	Only elites can mine the coin for the last many years
5	Everyone enjoys the same level of privacy!	5	Even its anonymity is now non-existent because of certain apps
ALL THE PILLARS FULFILLED		EVERY FLAW HAS BEEN FIXED	
1	The coins are not issued or controlled by any central authority	1	Highly Improved Scalability
2	Proof of work : people support the network & gain rewards	2	Higher maximum coin supply
3	Fair launch & rules No premine No ICO sales	3	Super low fees, really next to zero
4	Fixed maximum supply & specified block rewards plan	4	ASIC resistant edges protect the network & the PC miners
5	Public access to the blockchain history of its	5	ZK-SHADES Cryptography
1	Community Driven. No need to trust 3rd parties like banks	1	Able to support more & faster transactions
2	Everyone can participate with the mining procedure	2	Easier integer prices that are friendly for adoption
3	Decentralized coin distribution & Equality for all	3	Suitable for transfers of ultra small sums like \$1
4	Deflationary asset & reduced coin emission over time	4	ASIC have not mined the coin for the last many years
5	Everyone enjoys the same level of privacy!	5	The users can enjoy real privacy for their transactions

BITCOINZ Pure cryptocurrency Fundamentals and its Fixes for the BITCOIN Flaws

There are four main reasons behind this move.

- BITCOINZ had three listings in 2022: In TradeOgre, Exbitron and now in WhiteBIT exchange.

-The Project presented a new Dynamic Roadmap on 22-January-2022 in the Z-Brain Meeting of the BITCOINZ Community. The new Roadmap can be found in the main page of the Project.

- BITCOINZ is in a development frenzy recently with new developers joining its Community and many nice advancements in the Project's ecosystem like the BITCOINZ-DEX , the Army-Z , the Connect-Z and more.

- Most importantly, BITCOINZ is a pure cryptocurrency network that follows all the fundamentals that the classic Bitcoin introduced for years, with many extra advantages.

How BITCOINZ differs from the classic Bitcoin without breaking the classic fundamentals ?

BITCOINZ (BTCZ) was launched on 2017 and is a pure cryptocurrency that offers solutions to all the five “flaws” of the legendary Bitcoin :

- 1) Its scalability offered higher transaction speed and more transactions per second
- 2) BITCOINZ's high maximum supply is the ideal for easier prices without long non integer numbers.
- 3) The 21B coin supply in combination with the much more transactions per second, guarantees super low, next to zero fees even if it had the BTC cap and network load. BitcoinZ is ideal for transferring even very small sums of under \$10 with ~0% cost.
- 4) BITCOINZ's ASIC resistant Zhash algorithm protects the PC miners from the ASIC elites. This way it achieves a Decentralized Network with truly fair distribution of coins to the world Community. Not to the rich people owning an ASIC device.
- 5) BITCOINZ features private transactions offering true privacy for everyone.

DIGITAL ASSETS	 BITCOIN	 BITCOINZ	 BITCOIN GOLD	 BITCOIN PRIVATE	 BITCOIN DIAMOND	 BITCOIN SV	 BITCOIN CASH
UNIQUE BLOCKCHAIN ¹	YES	YES	NO	NO	NO	NO	NO
FORK/DROP FREE COINS ²	NEVER	NEVER	YES	YES	YES	YES	YES
PREMINE ³	NEVER	NEVER	YES	YES	YES	NEVER	NEVER
COMMUNITY ⁴ MINING	NO	YES	YES	NO	NO	NO	NO
MINED %	~90%	~45%	~83%	~98%	~90%	~90%	~90%
TRANSACTION FEES		~0					
PRIVATE TRANSACTIONS ⁵	NO	YES	YES	YES	NO	NO	NO
OVERVALUATION ⁶ INDEX	55000	0.5	73	N/A	26	175	625
PROJECT'S AGE	12.5 years	4+ years	3.7 years	3.5 years	3.7 years	2.7 years	4+ years

*All logos are property of their respected owners

1. A project that had its own genesis block and a unique blockchain from the very beginning.

2. A project that dropped free coins to holders of another coin. This takes place when there is a blockchain fork. Usually this way a new project is trying to "claim" a part of the community of a well-established project. By distributing the new coins to them, it gains free exposure.

3. A project that allocated a number of coins to specific founder's addresses. This is achieved by premining or instaminning which are both considered as unfair launching practices.

4. Projects that utilize ASIC resistant algorithms. So they enable a much wider range of people to use their PCs in order to support the cryptocurrency network (mining) with meaningful rewards.

5. The projects that offer transactions without revealing the identity of the user.

6. Lower is better. This index shows the cost for each coin based on its current price (7-Oct-2021) and if all of them had a same 21M maximum supply. We excluded BTCP because its supply numbers have been subject to miscalculations from many monitoring platforms.

BITCOINZ information table

6) (extra) BITCOINZ is a green Proof of Work Network since a) it utilizes a much more energy efficient algo than BTC b) the users can use their PCs for other activities while mining BTCZ because only the GPU is (mildly) used for the process and c) it supports more transactions per second with plenty of space for future upgrades.

At the same time BITCOINZ fulfills all the fundamentals of a pure cryptocurrency :

1) It was founded by anonymous founders and it is a 100% Community Driven project, with no central authority issuing coins.

2) 100% of its coin supply is distributed to its network's supporters (miners) with the Proof of Work model. Everyone is free to join it with the mining procedure using just a PC.

3) It had the fairest launch ever with absolutely no premine , no initial coin offerings and no instamine period (something that is questionable even for Bitcoin).

4) It is an asset that acts as a hedge against inflation because it has a fixed maximum supply and reduced coin emission over time with fair and slow mining halving plan, every 4 years.

Why BITCOINZ uses the "BITCOIN" name and why it is really different from the so many projects that used it.

BITCOINZ used the "BITCOIN" name adding a Z because it honored and followed all the aforementioned fundamentals that the classic BITCOIN introduced (fair rules, 100% Community Driven, 100% Decentralized, 100% Proof of Work) and at the same time it offered Zero fees, only PC-mining with its Zhash algorithm and optional privacy based on the Zk-snarks cryptography. So there was no better name to describe all these than "BITCOIN+Z".

It is worth mentioning that BITCOINZ is the oldest and maybe the only "BITCOIN" named project that can still be mined with a normal PC and it is not a Bitcoin blockchain fork since it had its own genesis block.

Other crypto projects that have used the "Bitcoin" name, did it afterwards, in a misleading way or they are just copies of the BITCOIN's blockchain (blockchain-forks) that have given free coins (forkdrops) to the Bitcoin holders. In such a way, these "BITCOIN" named projects try to enjoy a high free exposure by distributing coins to the BITCOIN owners. Sometimes bad actors from the BITCOIN chain-fork projects even steal the private keys from the BTC owners that try to claim their free coins in the BTC-forks.

In contrast, BITCOINZ had its own unique blockchain exactly like Bitcoin did and never made any forkdrops. Offering equal opportunities to everyone by distributing the 100% of its supply to the whole world Community and not to a closed team. Exactly like a real cryptocurrency should be destined to do, being a gift of Freedom and Equality.

A Conclusion for the cryptocurrency moves of the last month

As a conclusion, the moves that we saw during the last month are a trend and not a random event.

The biggest victims of this new downtrend are the very overvalued cryptocurrencies and the DeFi projects, especially their tokens because of the hyper-inflation and the many useless meme/scam projects .

BITCOINZ, being among the most classic, pure mineable projects with many advantages over Bitcoin, fixed supply and the most fair rules ever, makes it to surprise everyone acting as a hedge against inflation, questionable crypto and scam tokens.
