> Shariq is the latest high-profile addition to Genpro's management team. I am sure that his deep scientific acumen and extensive network will open up new opportunities for Genpro and our customers"
>
> *Anoop Ambika*

Anoop Ambika, CEO at Genpro said, "The Pandemic and its ensuing waves, has been a disruptor for all businesses across the globe. I'm glad that Genpro was able to do an excellent job during these difficult times by retaining and acquiring new talents and helping our partners expedite their drug discovery quest. Shariq is the latest high-profile addition to Genpro's management team. I am sure that his deep scientific acumen and extensive network will open up new opportunities for Genpro and our customers ".

Shariq holds a Master's in Public Health from San Diego State University and a Bachelor's in Biology and History from the University of Minnesota.

About Genpro Research
Genpro Research is a next-generation services and technology partner for the pharmaceutical, biotechnology, and medical devices industry. Our tools use Artificial Intelligence, Machine Learning, and Natural Language Processing algorithms to enable the automation of several processes in a drug development pipeline. We provide advanced solutions in Biostatistics &

Programming, Medical Writing, and Regulatory Submissions. Genpro currently has a US office in Waltham, MA. We have offshore development centers in three cities in India - Thiruvananthapuram, Baroda, and Bangalore.

Genpro offers two digital platforms as part of its product offerings. Voody for Automated Medical Literature Review and Publications and MOSS for Clinical Data Visualization and Analytics. Voody, Genpro's flagship product, is the

Shariq Alavi joins Genpro Research as the Head of Sales, VP Business Development

world's first and only integrated platform powered by AI-ML algorithms that helps researchers, medical writers, and reviewers to handle the entire workflow of search, authoring, quality control and publishing literature reviews and manuscripts. MOSS, on the other hand, provides a strong semantic search and automated data visualization capabilities and provide powerful data monitoring capabilities to clinical scientists, medical directors, and clinical development teams.
