The growing health consciousness among the masses and the escalating demand for animal-sourced protein are among the primary factors driving the meat market. In addition to this, the rising inclination towards food products with high protein value is further propelling the market growth. Moreover, the increasing usage of meat in the food industry is acting as another significant growth-inducing factor. Besides this, several technological advancements, including the utilization of robotics and automation technology for meat processing, are catalyzing the

product demand. Furthermore, continuous product innovations, such as the development of additive- and chemical-free meat, are positively influencing the global market. Additionally, the expanding consumption of processed poultry and pork meat, coupled with the growing expenditure capacities of consumers, are projected to bolster the meat market over the forecasted period.
