

# The Highly Anticipated Presale of New Metaverse Themed Cryptocurrency Token, MetaBlaze, begins February 22nd

*One of the hottest cryptocurrencies of the year, MetaBlaze, is set to go on presale on Feb 22, 2022.*

UNITED STATES, February 15, 2022  
/EINPresswire.com/ -- [METABLAZE is Integrating Non-Fungible Tokens \(NFTs\)](#) with blockchain-based gaming creating new possibilities for transaction transparency and user rewards for gaming time. NFTs are digital assets that are not fungible.

The advent of virtual real estate is considered a powerful source of wealth for both gamers and non-gamers combined. As sales of RE in the [Metaverse](#) rocket to never-before-seen highs, METABLAZE will take on a vital role in this movement by including property ownership as one element of its game strategy. Within the play-to-earn blockchain game, virtual lands will be available to buy, and the volume of game-players will substantially impact the land's worth.

Further, Play-to-Earn games are recognized as one of the most exciting innovations within the DeFi gaming ecosystem in recent years. Beginning February 22nd, 2022, the presale for METABLAZE, a new DeFi gaming utility token, will commence. One MetaRoyal NFT is given to those that contribute \$10,000 during the first presale round. One MetaRoyal NFT is given to participants who invest \$100,000 during the presale. The investors of MetaRoyal NFTs are entitled to royalties from the secondary sale of the NFTs. Individuals who mint a rare NFT for \$500 receive royalties from secondary market sales, dependent on how long they keep the NFT. This offers NFT holders a source of passive income and a safe haven.

METABLAZE aims to disrupt the crypto industry by combining passive income, non-fungible tokens (NFTs), and an immersive play-to-earn role-playing game (RPG) to join the ranks of existing successful, prominent crypto projects.

With its NFT collecting solution, METABLAZE offers NFT-based perpetual royalties on Ethereum, which will pay the first investors with perpetual royalties obtained from secondary market sales.

Perpetual royalties centered on NFTs are a radical idea that offers consumers passive revenue from the secondary market selling of NFTs.

A deflationary utility token, METABLAZE comes with a unique reward system that encourages continuous growth through BlazedApp, a decentralized application (dApp). Every token will be priced at 0.00007764 BUSD during the first round of the presale. Participants will receive a 61 percent discount, particularly compared to the forthcoming launch price of 0.0002 BUSD. Moreover, participants will receive an additional 10% incentive during the presale period, and the opportunity to acquire a limited edition, passive income generating NFT.

The goal of a blockchain metaverse is to break away from the conventional corporate structures and revenue extraction tactics used in today's game business. The unique nature of blockchain gaming may allow for more egalitarian participation options for players. It also suggests that each person in the Metaverse owns a piece of the Metaverse. The METABLAZE presale has seen a significant turnaround of users lining up to invest in the token and NFTs before its exponential rise. The project is focused on providing value to its holders by introducing perpetual royalties attached to its NFT economy. With the rise of NFT collections and metaverse tokens – METABLAZE is poised for a fantastic future due to its strong team and technology focus.

The presale begins on February 22nd.

2022, at 9 am ET. This might be one of the most successful new cryptocurrencies in 2022, one that nobody can miss!
