Coolfire Digitizing Workflows in Telecom Industry
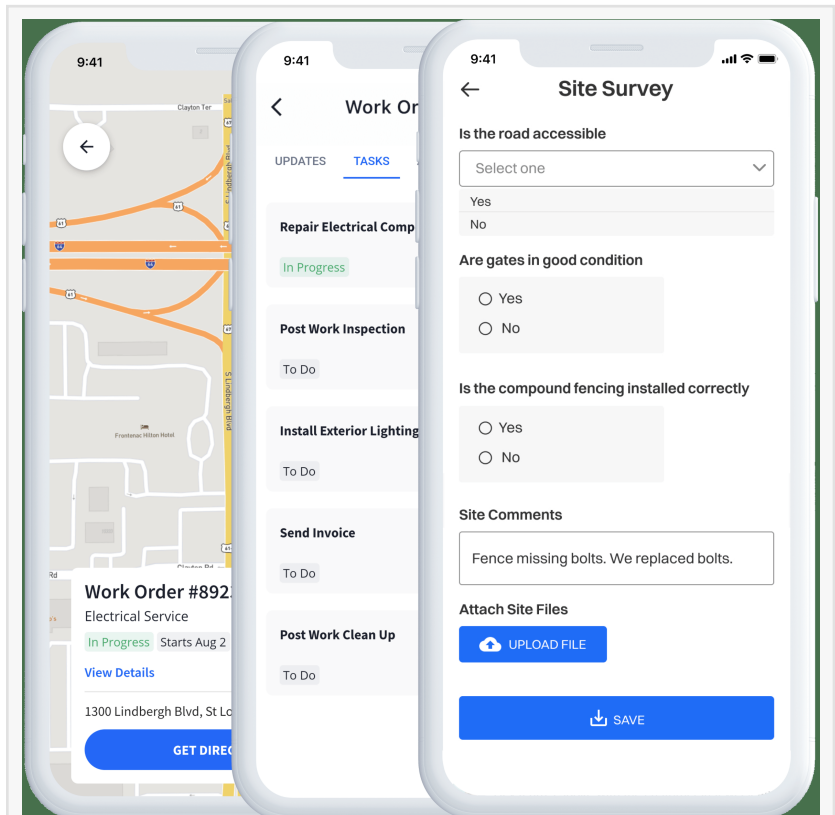

Growing demand for 5G technology drives digital transformation in the telecom industry.

ST. LOUIS, MO, UNITED STATES, February 16, 2022 /EINPresswire.com/ -- Coolfire, a leader in collaboration software for field operations, announced it is extending support to the telecommunications industry. Recent Coolfire software upgrades now enable telecom teams to coordinate work across multiple on-site use cases –including site audits, installations, and decommission.

Coolfire's collaboration software, Coolfire Core, was developed to help fast-moving field operations get organized around work and coordinate team tasks, communication, and workflow. The latest version of Coolfire Core adds new mission-critical features to extend workflows from the office into the field.

Coolfire Deploys Telecom Site Audit Software

Coolfire Digitizing Telecom Industry Workflows

With an increasing demand for 5G technology comes additional strain on the telecom field teams completing site upgrades and new cell site deployments. The new Coolfire Core features enable telecom field teams to better plan projects, manage job tasks, and capture data in the field.

"The demand for digitizing manual workflows in the field is at an all-time high," said Don Sharp, CEO at Coolfire. "Teams on the move not only need timely information, they also need a way to

coordinate tasks, communications, and manage their workflows. The latest enhancements are already having a major impact on how teams can work better together."

This recent launch further improves Coolfire's capabilities to support digital transformation within the field service space. Telecommunications teams are transforming their field ops with Core.

Glenline Telecoms Deploys Site Audit Software

[Glenline Telecoms](#) Managing Director, Mark Foran stated, "Coolfire has helped us dramatically accelerate our digital transformation efforts. Getting the right digital tools in place has significantly cut down on manual processes in the field, and allows us to deliver real-time actionable insights to our customers–not just a data dump."
