

# Microbiome Market Focuses On Developing Advanced Technological Improvements

*The Business Research Company's  
Microbiome Global Market Report 2022 –  
Market Size, Trends, And Global Forecast  
2022-2026*

LONDON, GREATER LONDON, UK,  
February 16, 2022 /EINPresswire.com/

-- The growing technological improvement is gaining popularity in the microbiome market. Microbiome market trends include major companies focusing on developing advanced technology solutions for

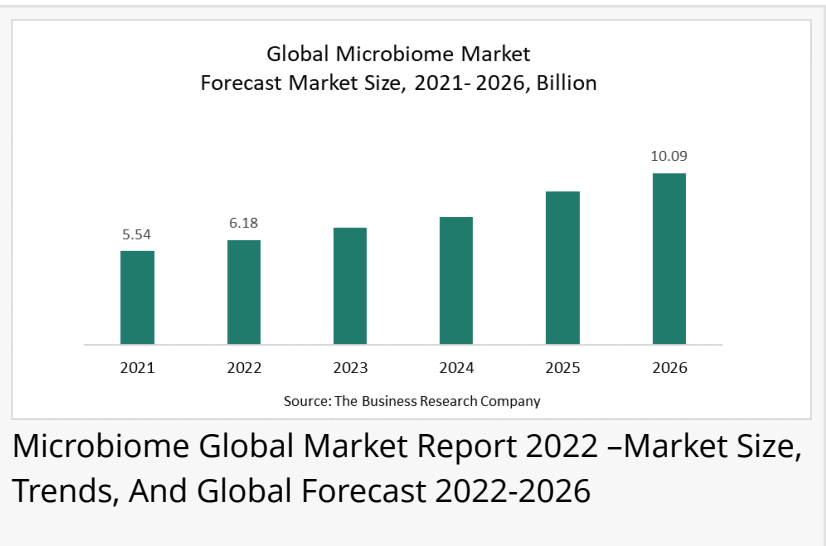

microbiomes. For instance, Seed, a new microbiome company, has introduced Probiotic and Prebiotic Daily Synbiotics for both females and males. The Daily Synbiotic Seed is the first to follow a microbe-system strategy with strain-specific advantages beyond digestive health such as cardiac safety, dermatological health, immune control, reproductive health, the integrity of the gut barrier and oxidative stress.

In January 2021, Novozymes, a Denmark based biotechnology company acquired Microbiome Labs for an undisclosed amount. Microbiome Labs' acquisition is a crucial step in expanding Novozymes' Human Health platform, giving it exposure to a wide range of patented solutions as well as access to the firm's network of health professionals. Microbiome Labs is a US-based probiotics company.

The [global microbiome market size](#) is expected to grow from \$5.54 billion in 2021 to \$6.18 billion in 2022 at a compound annual growth rate (CAGR) of 11.4%. The growth in the market is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The microbiome market is expected to reach \$10.09 billion in 2026 at

a CAGR of 13.1%.

The increasing prevalence of inflammatory bowel disease (IBD) is a key factor driving the growth of the global microbiome market. Inflammatory bowel disease is a multifactorial and autoimmune infection group consisting of two major entities such as ulcerative colitis (UC) and Crohn's disease (CD). Fecal microbiota transplantation (FMT) and probiotics were discovered as potential applications in many immune-mediated disorders, such as IBD, to restore microbial balance. These microbial therapies have shown the potential to reduce both the dysbiotic condition and the development of inflammatory mediators, thereby enabling remission, particularly in UC. In 2019, approximately 1.6 million people in the United States suffered from untreatable inflammatory bowel disease, including Crohn's or ulcerative colitis. Therefore, the increasing prevalence of IBD is expected to drive the growth of the microbiome market.

Major players covered in the global microbiome industry are MicroBiome Therapeutics LLC, Seres Therapeutics, Enterome Bioscience, Second Genome, Vedanta Biosciences Inc, AbbVie Inc., Rebiotix, Inc., Ritter Pharmaceuticals, LNC Therapeutics Inc. and ViThera Pharmaceuticals Inc.

TBRC's global microbiome market research report is segmented by type into fecal microbiota transplantation (FMT), microbiome drugs, by application into inflammatory bowel disease, diabetes, multiple sclerosis, rheumatoid arthritis, others, by technology into genomics, proteomics, metabolomics.

[Microbiome Global Market Report 2022](#) – By Type (Fecal Microbiota Transplantation (FMT), Microbiome drugs), By Application (Inflammatory Bowel Disease, Diabetes, Multiple Sclerosis, Rheumatoid Arthritis), By Technology (Genomics, Proteomics, Metabolomics) – Market Size, Trends, And Global Forecast 2022-2026 is one of a series of new reports from The Business Research Company that provides a microbiome market overview, forecast microbiome market size and growth for the whole market, microbiome market segments, geographies, microbiome market trends, microbiome market drivers, restraints, leading competitors' revenues, profiles, and market shares.
