It also includes competitor and regional analysis, and contemporary advancements in the global market.

ketogenic diet food market

The ketogenic (keto) diet is currently gaining momentum across the globe as it helps in burning fat from the body more effectively. It includes the consumption of food with low-carb, high-fat and moderate protein content. The intake of fat helps in replacing the carbohydrate intake and producing the required number of calories needed in a day. This helps in turning fat into ketone in the liver and supplying energy to the body. The global ketogenic diet food market exhibited moderate growth during 2015-2020. Looking forward, IMARC Group expects the global ketogenic diet food market to grow at a CAGR of 5.80% during 2021-2026.
