Green packaging represents a sustainable packaging solution that utilizes specialized manufacturing techniques to reduce environmental degradation. The production process of green packaging items includes the usage of various recyclable and biodegradable materials, such as bioplastics, Styrofoam, recycled paper, etc. As compared to the traditionally used synthetic packaging, green packaging offers versatility, easier disposal, better flexibility, etc. Owing to these benefits, green packaging is extensively used across several industries, such as personal care, food and beverage, [healthcare](#), etc.

The growing environmental concerns and shifting preferences of consumers towards lighter, thinner, and eco-friendly packaging solutions are driving the green packaging market in the Europe. Additionally, the implementation of stringent government policies for reducing the use of plastics is encouraging the utilization of alternative packagings, such as aluminum foil and

paper. Furthermore, the increasing use of reusable materials for packaging processed and ready-to-eat food products is also propelling the product demand. Moreover, extensive research and development activities have led to the introduction of new and innovative green packaging materials, including bio-based resins. This, in turn, is expected to catalyze the market growth in the coming years.
