Report Metric

Historical: 2016-2021

Base Year: 2021

Forecast Year: 2022-2027

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Flexible packaging is primarily manufactured by using easily reformed materials that could be molded into different shapes. It is usually made by combining numerous materials, such as high-quality paper, film, aluminum foil, etc. These materials can be shaped into pouches, bags, liners, overwraps, etc. Consequently, flexible packaging is extensively used across diverse sectors, food processing, consumer products, cosmetics, pharmaceuticals, etc.

Market Trends

The increasing demand for processed food items due to the on-the-go consumption habits is

further augmenting the adoption of flexible packaging in the food sector. Furthermore, the rising consumer awareness towards several benefits of flexible packaging pertaining to food safety, effective permeability, longer shelf life, convenience, etc., is also propelling the market growth. The market is further catalyzed by numerous technological advancements leading to emergence of innovative and advanced product variants. A significant growth in the pharmaceutical and nutraceutical sectors are also bolstering the demand for flexible packaging. In the coming years, the growing popularity of sustainable and recyclable packaging alternatives will continue to spur the growth of the global flexible packaging market.
