Looking forward, IMARC Group expects the market to grow at a CAGR of around 8% during 2021-2026.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Plastic surgery instruments are manufactured using sterile materials, such as fiber and metal. These instruments are non-corrosive, non-allergenic, and sterilizable and help in performing surgeries on different body parts, such as the craniomaxillofacial and musculoskeletal. In recent times, the demand for plastic surgery instruments has increased based on the growing number of individuals undergoing reconstructive and cosmetic surgeries.

## Market Trends

The increasing consumer consciousness towards physical appearances, especially among the aging population for skin rejuvenation, is significantly driving the market for plastic surgery instruments. The rising adoption of plastic surgery instruments for preserving vascularity, healing wounds, and improving the aesthetic and functional well-being of the body is further propelling the market growth. Moreover, the rising demand for minimally invasive (MI)

procedures, along with several innovations in tissue engineering, gene therapy, alloplastic materials, and computer-assisted imaging technology, are also bolstering the market for advanced plastic surgery instruments.
