

Gemini Risk Partners Aligns with Havoc Shield to Improve Cybersecurity Insurance Carrier Application Acceptance

Law Firm Insurance Broker Offers Cyber Risk Assessments for Proactive Protection and Simplified Cyber application Process

CHICAGO, IL, UNITED STATES, March 3, 2022 /EINPresswire.com/ -- Gemini Risk Partners Principal David Kramer today announced a partnership with [Havoc Shield](#), an insurtech cybersecurity software platform focused on insurance brokers, to offer their Cyber Fitness Assessment and Custom Cybersecurity Program to improve cybersecurity insurance application accuracy for their clients.

The agreement brings together cybersecurity insurance and a proactive cybersecurity risk scorecard to make the process of applying for cybersecurity insurance easier with confidence the questions asked by carriers are complete with assistance from a third-party, Havoc Shield, in this case.

"We're thrilled to offer our law firm clients this proactive risk assessment to know where they stand against hackers and ransomware," said David Kramer, Gemini Risk Partners Principal. "Cybersecurity is one of the hottest topics for lawyers with the immense amount of intellectual property and proprietary information they have access to, so making sure they are properly protected while making the cyber insurance application process easier for both sides is why we are partnering with Havoc Shield."

Customers of Gemini will now be able to answer a few common cybersecurity questionnaires and receive a simplified scorecard of where they may have gaps. Havoc Shield's Custom Program built specifically for Gemini allows those clients to easily fix those security gaps in the Foundations Platform which is a dozen cybersecurity tools in a singular dashboard.

Your Cyber Security Fitness Check is Complete.

Let's see how you did!

Do you scan or filter emails for malicious attachments?	All Set!
Do you use DKIM, SPF or DMARC to authenticate your email?	All Set!
Have you disabled the Remote Desktop Protocol (RDP) on all of your computer networks endpoints and servers?	Needs Help
Do you use multi-factor authentication wherever it is available, for example when signing on to a remote desktop?	All Set!
Do you have a process in place to regularly download and install patches within 30 days of release on your computer network (including all hardware and software publicly accessible through the internet)?	All Set!
Are all systems and data on your computer network backed up at least weekly?	All Set!
Are backups kept fully isolated from your network in an offline, air gapped or cloud based storage, so that they are not accessible from the rest of your computer network?	Needs Help
Are administrative privileges restricted to specific users on your computer network?	All Set!
Do you encrypt all sensitive and confidential information stored on your computer network and sent externally by email?	All Set!
Do you run Microsoft Windows 7, Microsoft Windows Server 2008, or any other unsupported operating systems on your computer networks?	Needs Help

Risk assessment scorecard shows exactly what cybersecurity gaps each customer has to fix

This risk assessment and remediation toolset gives the attestation and assurance to insurance carriers that insureds have identified and fixed gaps through a third-party cybersecurity organization. As more companies inquire or add cybersecurity policies to their business operations policies, insurance carrier applications have increased in complexity.

“We are excited to partner with Gemini Risk Partners to provide this added-value service to their customers,” said Havoc Shield Founder and CEO, [Brian Fritton](#). “They have been an exceptional partner as their focus is to reduce risk for their clients, so their proactiveness and attention to client needs has been impressive. They realized cybersecurity threats are real, especially for law firms who control a massive amount of IP and customer data that is valuable to hackers.”

Havoc Shield’s Cyber Fitness Assessment tool aligns to cybersecurity insurance carrier applications, creating a simplified way to determine if the company filling it out has the proper risk mitigations steps in place through a scorecard highlighting gaps in their cybersecurity posture. Those gaps can be mitigated by using Havoc Shield’s all-in-one Foundations Platform to set up steps like Multi-Factor Authentication, conduct vulnerability scans, install best-in-class antivirus and patching software, distribute cyber policies and more.

Their Custom Cybersecurity Program maps the individual insurance carrier requirements to the specific modules in

the Foundations platform, helping to “do the homework” to get application answers to a “Yes” helping to reduce the time needed for brokers to educate and walk through the app with insureds. This also delivers a more complete application when submitting to carriers for coverage approval. To learn about these products, visit havocshield.com/brokers.
