

DCS announces entry in to the US\$100 Billion dollar Game-Fi Industry

DCS have entered strategic discussions to co-invest with the Australian based company Darqtec, to create a series of blockchain based games.

NORTHGATE, QLD, AUSTRALIA, March 2, 2022 /EINPresswire.com/ -- DCS (Decentralised Data Crypto Systems) a leading developer of cross-chain Zero Knowledge Proof based privacy solutions, announced today that they have entered strategic discussions to co-invest alongside Darqtec Pty Ltd to create a blockchain based game development division within the

company. The new division will focus on the emerging GameFi industry which now represents almost US\$100 billion, or 50% of the total gaming industry business.

Whilst they are yet to finalise the deal, Jaime Terauds, co-founder of DCS, expects to make a major announcement in the coming weeks.

"This is an initiative we have been working on in stealth mode with Darqtec for several months now. As it became apparent to my business partner, Aaron Casar (cofounder of DCS) and I, that aligning our other companies' operations, where we share complimentary skill sets makes great strategic sense".

Terauds continued "The new division will utilise the extensive development skills of Darqtec, to add considerable depth and expertise to the existing DCS team". The deal will see DCS take a strategic equity position in Darqtec Pty Ltd, and co-develop a range of GameFi based titles.

Aaron Casar, CEO of Darqtec added "We have some really exciting games already in production and once we've agreed on the final structure, we'll be announcing the details of our first project in the coming weeks". "Here at Darqtec, we are really excited about the prospects for the Meta Verse and the application of DAOs, Gamefi, and SocialFi, in this space, and we are looking

forward to working with Jaime and the DCS team to see our vision come to light".

DCS plans to launch a first of its kind, CAR-DAO application-SUPERCARS in March this year.

About DCS:

Decentralised Data Crypto Systems are the pioneers of the Mix-ZK privacy protocol which offers privacy solutions for users on the BSC network using Zero Knowledge Proofs in Combination with Hybrid Data Structures, to provide an additional encrypted layer to anonymise the transaction whilst simultaneously protecting user identity, message transmission privacy, and the data's structural privacy. The technology has myriad of applications including securing medical records, enabling anonymous voting, charitable contributions, corporate tenders, auctions, and various archival and storage applications.

About Darqtec:

Founded in 2019, Dargtec is an Australian-based web and software development company firm focused on the emerging field of blockchain, Web 3.0, FinTech and GamFi industries. Dargtec are development partners of Australia's newest Digital Asset Exchange, Pipezi Pty Ltd, launching in Australia in March 2022, with a focus on small and medium enterprises.
