

# At a CAGR of 5.8%, Electric Wheelchair Market to Surpass \$4,099.1 Million globally by 2025 | AMR

*Increase in geriatric population is one of the primary factors that fuels the manual wheelchair market growth in the coming years*

44-845-528-1300, UNITED STATES,

UNITED STATES, March 3, 2022

/EINPresswire.com/ -- According to a new report published by Allied Market Research, titled, "[Manual Wheelchair Market](#) by Category, Design & Function, and End User: Global Opportunity Analysis and Industry Forecast, 2018 - 2025," the global manual wheelchair market was valued at \$2,609.7 million in 2017 and is projected to reach

\$4,099.1 million by 2025, registering a CAGR of 5.8% from 2018 to 2025. Manual wheelchairs are specifically designed for use by individuals with mobility, lower extremity, and spinal cord disabilities. Specific needs regarding style, weight, comfort, and performance are taken into consideration while designing these chairs.

These chairs help individuals to prevent pressure ulcers and shoulder injuries as well as help maintain a good posture. Various features and accessories are added to the chair to cater to the requirements of the end user. These include fixed or detachable arms, fixed or adjustable height, and full length or desk length arm.

Other factors such as rise in spinal cord injuries, rise in incidence of disabilities, and accidents coupled with growth in government expenditure on healthcare are expected to open new avenues for the manual wheelchair market players in the future. However, inclination of consumer toward electric and automated wheelchairs hinder the growth of the manual

wheelchair market. Emerging trends that have a direct impact on the dynamics of the wheelchair industry, include improved wheelchair efficiency to provide more comfort and convenience, increase in adoption of power assistance device, and rise in adoption of hybrid concept in wheelchair.

In addition, greater strength and durability of material along with less moving parts have considerably reduced the maintenance cost that leads to increased adoption of adult wheel chair. Thus, recent advancements in material and engineering design of manual wheelchair are expected to drive the growth of the wheelchair market during the forecast period.
