Market Overview

A rising number of diabetic neuropathy cases, lifestyle changes, demand to reduce the risk of chronic diseases. As per the world bank, About 422 million people worldwide have diabetes, the majority living in low-and middle-income countries, and 1.6 million deaths are directly attributed to diabetes each year. Moreover, an estimated 1.5 million deaths were directly caused by diabetes in 2019

As per the International Diabetes Federation, 87% of diabetes-related deaths occur in low- and middle-income countries. But only 35% of diabetes-related health expenditure is spent there. So, with the rising awareness about the treatment and prevention methods regarding the

various effect of disease, the demand for diabetic foods is on the rise. However, High costs associated with diabetic foods and lack of awareness among the population are some of the factors that are likely to restrain revenue growth of the diabetic foods market over the forecast period

COVID-19 Impact

The COVID-19 pandemic has added an enormous toll to the existing challenge of diabetes care worldwide. Patients with diabetes are known to have an increased risk of infections, in particular skin infections, Genito-urinary tract infections, and (bacterial) respiratory tract infections. Many Covid-19 patients initially show type 1 diabetes-like symptoms – extremely high sugar levels, ketoacidosis (a complication where blood turns acidic because of excess ketones produced), and need insulin injections. In China, a nationwide study reported a higher prevalence of diabetes among patients with severe COVID-19 as compared to patients with non-severe disease (16.2% vs 5.7%). In the USA, among 5,279 patients diagnosed with COVID-19 in a prospective cohort study in New York City, the prevalence of diabetes was higher in patients admitted to the hospital than patients not admitted (34.7 vs 9.7%)
