Market Overview:

Squamous cell skin cancer typically presents itself as abnormal growth on the surface of the skin. It can present itself as a wart, crusty spot, sore that does not heal, or ulcer. It may also develop as a lump on the neck. Patients should visit a doctor if they notice any of these symptoms. Squamous cell skin tumors can be inherited and can also present themselves as a rash or an unusually sensitive area of the skin. If a tumor is large or has spread beyond the skin's surface, the best treatment is surgery. During surgery, a surgeon removes cancer by excising it without damaging surrounding tissue. In certain instances, radiation therapy may be recommended. If radiation is not an option, a patient may also undergo chemotherapy to treat cancer. If surgical treatment is not an option, a multidisciplinary team may prescribe systemic chemotherapy.

Some immunotherapies can be used to treat advanced squamous cell skin cancer.

Competitive Landscape:

Major players operating in the global cutaneous squamous cell carcinoma treatment market include Merck & Co., Inc., Vidac Pharma, Castle Biosciences, Regeneron Pharmaceuticals, Inc., Cadila Healthcare Limited, Cipla Limited, Eli Lilly and Company, and Sanofi S.A.

Key Market Drivers:

The increasing incidence of cell carcinoma in the world is expected to drive the growth of the global cutaneous squamous cell carcinoma treatment market. For instance, according to Union for International Cancer Control, in 2021, there were around 19.3 million new cases of cell carcinoma in the world. Squamous cell cancer is a common skin disease. It causes more deaths than any other type of cancer. SCC is more likely to occur in men than in women, but it can affect any age. It often begins on the lip or ear. Symptoms of squamous cell carcinoma include scaly, itchy, and bleeding tissue. It can also be difficult to detect because it is often not visible at first. Increasing treatment launches by key market players are estimated to augment the growth of the global cutaneous squamous cell carcinoma treatment market.

Covid-19 Impact Analysis:

During the COVID-19 pandemic, there was a significant drop in skin biopsies globally. For instance, according to PLOS, skin biopsies decline by around 15%, biopsies for keratinocyte carcinoma declined by 18%, and melanoma biopsies reduced by around 27%. However, treatment measures were of significant specificity for keratinocyte carcinoma and melanoma.

Key Takeaways:

North America is expected to dominate the growth in the global cutaneous squamous cell carcinoma treatment market, owing to the increasing prevalence of cell carcinoma in the region. For instance, according to the American Cancer Society, there are around 5.4 million basal and squamous cell skin cancers cases in the U.S. every year.

The Asia Pacific is estimated to witness high growth in the global cutaneous squamous cell carcinoma treatment market, owing to the increasing expansion of cancer care hospitals in the region. For instance, according to Business Standard, there are over 27 dedicated cancer hospitals and 300 multispecialty ones in India.
