

Deep Fryer Market Expected to reach \$612.5 million by 2026

Rapid growth of the food service industry is expected to provide major impetus to the growth of the global deep fryer market.

PORTLAND, 5933 NE WIN SIVERS DRIVE, #205, OR 97220, UNITED STATES, March 14, 2022

/EINPresswire.com/ -- According to a new report published by Allied Market Research, titled, "[Deep Fryer Market](#) by End Use and Distribution Channel: Global Opportunity Analysis and Industry Forecast, 2019–2026," the global deep fryer market size was \$487.6 million in 2018, and is expected to reach \$612.5 million by 2026, registering a CAGR of 3.0% from 2019 to 2026.

Frying is one of the most popular process of cooking food. Deep frying cooks food faster, more even, and imparts tenderness. As a result, a large economical potential lies in development of improved and innovative deep fryers. New frying technology is evolving that includes improving oil quality, reusing oil, and process automation.

Rapid growth of the food service industry is expected to provide major impetus to the growth of the global deep fryer market. Hectic lifestyles have resulted in changing of consumers eating habits. As a result, HORECA industry have seen widespread expansion across both developing and developed regions. Some of the appetizers including but not limited to French fries, cheese fritters, onion rings, fried fish sticks, mozzarella sticks, scotch eggs, fried chicken tenders & cutlets, potato chips, fried zucchini disks, banana & pineapple fritters and doughnuts are deep fried. Wide acceptance of such appetizers has created high demand for deep fryers, especially in commercial applications. In addition, increase in experimentation & innovations in varieties of cuisines coupled with growth in the gastronomy industry augments the deep fryer market

expansion in the upcoming years

Formation of dangerous and toxic compounds such as acrylamide can be linked to frying food in very hot oil. Acrylamide is often formed in certain food such as meat, owing to very high-heat cooking methods; for instance, deep frying. International Agency for Research on Cancer states intake of acrylamide might cause endometrial, ovarian, breast, esophageal, and pancreatic cancer. Growing consumer consciousness about ill effects of deep frying is expected to impede the global deep fryer market expansion.
