Various factors such as increased Agility and Productivity, improved scalability and reliability, reduced costs. In addition to reduced vendor lock-in, enhanced portability and speed are some of the key driving factors for the growth of this market. However, intense competition and market pressure, persistent data storage, service integration are some of the factors which may restrain the growth of the market.

Furthermore, the requirement of continuous delivery due to the adoption of evolving technology and enhancement and growing adoption of cloud platforms is expected to boost the opportunities for the market.

Most of enterprise now a days implementing the emerging technology such artificial intelligence, machine learning and big data analytics in their regular practices. This implementation of cutting-edge technologies require a huge data for processing and fast, scalable and agile environment for the development and deployment of the application creative lucrative growth opportunities in the cloud native technology market globally.

Cloud native technologies include DevOps which provides the developers to fully automate continuous integration and continuous delivery pipelines as it rapidly test and push new codes to production of the application. The enterprises are also be able to bring new ideas to production within minutes or hours instead of weeks and months which thus result in greater innovation and competitiveness. With the already offered scalability the enterprise would also able to match the demand of the profile which does not need an extra infrastructure planning and provisioning. Thus due to the increased scalability organizations would able to reduce their cost in addition to the enhanced productivity which is driving the growth of this market.

Impact of COVID-19 on Cloud Native Technologies Market:

• The emergence of COVID-19 pandemic has severely affected almost all industries across the globe. Further, lockdown enforcements and restrictions on movements of non-essential goods as well as resources in various countries has disrupted supply chain of electronic components & networking equipment. This, has led to delay in supply of electronic components required in manufacturing of the network equipment.

• Companies have continued to expand cloud services and application development service during the pandemic. Before the pandemic took hold, various organizations were providing manual release of applications to customers.

• New learnings among companies with respect to work-from-home (WFH) and data accessibility during the lockdown period has resulted in increasing enquiries for space and services at data centers and this trend is expected to create opportunities in for the market during the forecast period.
