

MEG's digital quality management system achieves ISO 27001 certification

Certification with the International Standards Organization (ISO) validates the Irish medtech company's commitment to high level data security practices.

DUBLIN, IRELAND, March 15, 2022 /EINPresswire.com/ -- Certification with the International Standards Organization (ISO) validates the Irish medtech company's commitment to high level data security practices.

MEG, a leading provider of healthcare digital quality tools, today announced that the company has received ISO/IEC 27001:2013 certification, signifying it adheres to the highest international standards on information security for the delivery and support of its cloud-based quality management software.

MEG's integrated tools help hospitals monitor and improve care quality, reduce patient risk and alleviate onerous paperwork for staff through the use of interoperable, mobile and cloud-based technology.

ISO 27001 is one of the most widely recognized and internationally accepted information security standards. It's one of the few standards that uses a top-down, risk-based approach to evaluation. The certification holders are rigorously audited to ensure they follow the needed procedures and policies to meet the highest information security management standards.

Reflecting on the achievement, MEG's CEO, Kerrill Thornhill, said, "Getting certified reflects the importance we place on protecting our clients' data and has helped us to define a set of policies and processes that ensure confidentiality, integrity and availability for all of the data that MEG handles. It also helps us to achieve our goal to become the leading end-to-end healthcare quality management system globally."

CEO*

One of the most important considerations for any healthcare organisation is how to effectively secure and protect sensitive information. The ISO 27001 certification provides customers with an additional industry source confirming that MEG will continue meeting increased security requirements, giving them confidence that the company is maintaining best-in-class security standards.
