Rise in geriatric population as they are susceptible to diseases and require surgery for survival, larger adoption of minimally invasive surgeries, rise in R&D activity in the life science sector, and

growth in healthcare infrastructure drive the market. However, high cost of equipment in the developing region is expected to hinder the growth of the market. In addition, the growth in incidence of disease requiring microsurgery and number of out-patient services provide different opportunities for the market growth.

The global surgical operating microscopes market is segmented on the basis of application, end user, price range, and geography. According to application, the market is divided into neuro and spine surgery, gynecology and urology, oncology, plastic and reconstructive surgery, ENT surgery, ophthalmology, and dentistry. Based on the end users, the market is bifurcated into hospitals and outpatient facilities. By the price range, the market is categorized into low, mid, and premium. By geography, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
