Autoinjector is a medical device, which is used to administer a particular dose of drug into the body. These devices are easy to use, are cost effective, and can be used by patients or even by untrained professionals. These devices are preferred over conventional devices as they are efficient, with improved and technologically advanced drug delivery mechanisms. Autoinjectors are used in several applications such as rheumatoid arthritis, anemia, migraine, multiple sclerosis, and other therapies.

On the basis of application, the market is categorized into rheumatoid arthritis, multiple sclerosis, anaphylaxis, and others. The anaphylaxis segment held a dominant position in the market, accounting for about 38.5% share of the global autoinjectors market in 2019. As per the Asthma and Allergy Foundation of America, allergic conditions are the most common health issues affecting children in the U.S. According to the European Academy of Allergy and Clinical Immunology (EAACI), allergy is the most common in Europe. In 2018, more than 150 million Europeans suffered from chronic allergies and it is expected that half of the European population would be affected by 2025. According to the Rheumatoid Arthritis Support Network, in 2018, the rheumatoid arthritis affected over 1.3 million American and as much as 1% of the global population. Furthermore, rise in occurrences of rheumatoid arthritis to drive the demand for autoinjectors.
