The report sheds light on the mergers and acquisitions, collaborations, joint ventures, brand promotions and product launches, agreements and partnerships, and corporate and government deals. The comprehensive analysis of the competitive landscape offers the readers a deeper understanding

about the competitors.

The report further offers a complete value chain analysis along with an analysis of the downstream buyers and upstream raw materials. The study focuses on global trends, regulatory frameworks, and macro- and micro-economic factors. The report also provides an extensive analysis of the segment and sub-segmented expected to dominate the market over the projected period. The report offers a forecast estimation of the market with regards to the analysis of the market segmentation, including product type, end-user industries, application spectrum, and other segments.

In January 2020, Automazioni VX, Inc. entered into a cooperative agreement with Merck Animal Health, a division of Merck KGaA. The collaboration was aimed to launch Innoject Pro, a uniquely developed technology for subcutaneous injection vaccination of chicken. The technology can be utilized in conjunction with the Innovax vaccine by Merck Animal Health, which is used to safeguard poultry from bacterial infections.

The poultry segment is expected to lead the global veterinary vaccines market throughout the forecast period, expanding at a CAGR of 7.0%. The increased need for risk-free pet food, associated with a growing focus on developing new animal protection approaches, is estimated to drive the segment during the forecast period.

The injection segment is projected to retain the largest market share throughout the forecast period. Growth of the segment is attributable to increasing use of injection vaccines for protection of animal health. Injection vaccines play a crucial role in preventing and controlling the dissemination of disease outbreaks in both farm animals and livestock.

Throughout the forecast period, the inactivated segment is expected to dominate the market for veterinary vaccines. Inactivated vaccines are free from bacteria and suitable for rehabilitation, except in case of immunocompetent patients. These vaccines are usually compressed, which makes their shipping and preserving simple.

Due to growing prevalence of viral infections among livestock, including the Nipah virus infection, avian influenza, canine influenza, swine flu, and bird flu, the viral segment is expected to lead the market during the forecast period.

North America is expected to dominate the global market for veterinary vaccines during the forecast period, due to rising incidence of animal diseases and growing population of pets in the U.S.

Key market participants include Zoetis Inc., Bayer AG, Virbac SA, Merck KGaA, Eli Lilly and

Company, Phibro Animal Health Corporation, Elanco Animal Health Incorporated, Aptimmune Biologics Inc., Dechra Pharmaceuticals PLC, and Laboratorios HIPRA, S.A.
