

VCDoctor Launches Next-generation White Label Telemedicine Solution Quality Care Made Easy

VCDoctor has launched an all-new Telemedicine solution to simplify healthcare business by eliminating patients' need to visit doctors physically.

CORONA, CA, UNITED STATES, March 24, 2022 /EINPresswire.com/ -- COVID-19 has had a significant impact on community health centers, clinics, and Hospitals. As more and more patients seek alternatives to in-person appointments, providers must rethink their care delivery approach.

VCDoctor offers a one-stop [HIPAA-compliant telemedicine solution](#) for bringing doctors and patients on a single platform, enabling better care, outcome, and revenue.

What is Telemedicine?

Telemedicine or telehealth services eliminate the need for patients to visit medical facilities and doctors. Patients can meet with a doctor using any device, such as a smartphone or a laptop.

The term telemedicine was coined by Dr. Ken Bird in 1960. In 1968, Dr. Bird built and operated Boston's first "telemedicine" system, which linked a medical station at Logan Airport with hospital doctors who provided remote diagnosis, treatment, and medical image transmission. In 1970, a second link was built.

Telemedicine services now include more than just voice conversations; it also includes the use of the internet to allow face-to-face consultations between patients and doctors with full access to patients' medical charts at their fingertips.

VCDoctor Telemedicine Solutions for Clinics - VCDoctor brings a next-generation [white-label telemedicine solution](#). With no set-up required on the clinics part, setting up a fully customized virtual clinic is now quick and straightforward.

VCDoctor [Telemedicine Solutions for Healthcare Startups](#) - VCDoctor Program is designed in a manner that you can customize it as per your startup methodology needs or the way you want to. With us, you can be assured of the best prices in the market without compromising the quality.

Benefits of Telehealth

For clinics, telemedicine promises fewer patient visits, shorter hospital stays, the ability to provide tailored medical care, disease diagnostics, and an overall improvement in service quality.

Patients, in turn, can monitor their health from home, receive highly specialized care even in remote areas, and manage their drug consumption, all of which contribute to an improvement in patient quality of life.

“Technology is not meant to replace doctors. When it comes to telehealth services, there is a lot of focus right now on concepts that seem cool. We never wanted to go down that road. We were very clear about the type of solution we wanted to create. ” said Sanjeev Agrawal, CEO, and Founder of VCDcotor.

“We've created a customizable telemedicine solution. Our telemedicine software is fully white-label and customizable. The ultimate goal is to make healthcare more accessible and providers' jobs easier in an increasingly consumer-oriented healthcare market.”

The VCDoctor Advantages

No Upfront Costs- Available on the web, Android, and iOS. No setup cost. Use the out-of-the-box features or customize as per your need.

Easy for Patients to Use - Connect patients and doctors virtually within seconds.

Secure, HIPAA-compliant - Providers can communicate with their patients from anywhere using Laptop/Desktop or Mobile device seamlessly and securely.

Mobile-Friendly Payments - Use any payment method for online transactions. Easy to integrate payment options that support all devices.

Simplify Management- Easily track and manage stock & inventory of medical supplies, as well as manage any of their details such as location, price, expiry dates, and so on.

Built For Scale - VCDoctor is built to help clinics & healthcare startups of any size to grow their service faster. The platform can seamlessly handle large volumes of expected new customers.
