Global methane market is driven by increasing global electricity demand along with ongoing transition of coal to gas switching of power plants. The demand has been further fuelled by economic recovery in conjunction with growing industrial, automotive, and chemical sectors. The physical structure of methane industry involves production & exploration, processing, transportation, storage, local distribution, and end-users. Expansion of pipeline projected in U.S. is expected to play crucial role in increasing methane production and supply constrained demand. For instance, partially completed projects such as Acadania Expansion Project, Cameron Extension Project, along with Whistler Pipeline are likely to be in service by 2021 to cater U.S. natural gas export market. Such scenario is projected to drive methane market growth over the forecast period.

What are the key features report offers?

1. It offers several ways for exploring the market growth opportunities.
 2. It represents the various statistics of financial terms in the businesses.
 3. It provides insights into factors affecting the growth of the Methane market.
 4. Furthermore, it gives massive data of historical records, existing statistics, and futuristic developments.
 5. It offers the country level regional analysis of the market in terms of size and scope for the Methane market.
 6. It provides the strategic planning methodologies for the Methane industries.
 7. It tracks and analyzes the competitive landscape at the domestic and global platforms.
- The report also looks at the influential factors that are affecting the development of the global Methane market. This statistical report also offers various internal and external driving as well as restraining factors for this research report.
