Car tuning, also referred to as automotive tuning, is the process of modifying a car to improve its performance based on specific user needs. Tuning improves engine function and provides better fuel economy and torque to the vehicle, enhancing its overall performance. Generally, car tuning involves the addition, replacement, or alteration of various automotive parts and systems. It thus

helps to increase the vehicle's power output and enhances its appearance altogether. Revenue growth of the global car tuning market can be further attributed to factors such as surging need growing demand for fuel-efficient, high-performance light and heavy commercial vehicles, increasing adoption of electric vehicles (EVs) due to stringent emission laws and rising prices of petrol, and surging need for automotive tuning and remapping services.

Some Key Highlights in the Report:

Among vehicle type segments, the global car tuning market is segmented into passenger vehicles, light commercial vehicles, and heavy commercial vehicles. The passenger vehicles segment is expected to reach the largest market share over the forecast period due to favorable factors. Rise in production and sales of passenger vehicles globally, increasing demand for car tuning and engine remapping services, expanding transportation & logistics sector, and growing need for high-performance vehicles are among the major factors boosting the growth of this segment.

Based on modification area, the global car tuning market is segmented into audio, interior, body tuning, engine tuning, suspension tuning, tires, and others. The engine tuning segment is expected to dominate other segments with the fastest revenue growth rate during the forecast period. Growth of this segment is mainly attributed to rising need for dynamic vehicle performance and improved fuel-efficiency, increasing use of engine tuning and remapping solutions such as chip installation, OBD (on-board diagnostics) tuning, tuning boxes, and advanced ECU remapping, and emergence of highly advanced engine tuning techniques such as EFI (electronic fuel injection) and EEPROM reprogramming.

North America was the most dominant regional market in the global car tuning market in 2020, accounting for the largest revenue share. Primary factors driving the revenue growth of this regional market are rapid adoption of advanced automotive technologies, rising focus on improving vehicle power and fuel economy, increasing use of automotive tuning & remapping services among car enthusiasts, and presence of top industry players such as COBB Tuning, Derive Systems, and AEM Electronics Inc., in the region.

The car tuning market in Asia Pacific is projected to register the fastest CAGR during the forecast period, owing to increasing production and sales of passenger and commercial vehicles, growing demand for car tuning services, and growing inclination towards vehicle personalization.
