

# Laser Resurfacing Market Top Companies, Business Growth & Investment Opportunities

*Laser resurfacing market presents the analytical depiction along with the current trends and future estimations.*

PORTLAND, OREGON, UNITED STATES, March 28, 2022 /EINPresswire.com/

-- Laser resurfacing is also known as lasabrasion, laser peel, or laser vaporization and is used for the treatment of various skin problems such as facial wrinkles and scarring. The laser beam is used for removing layers of the skin. It has two types which are ablative and non-ablative. CO2 laser resurfacing and erbium laser resurfacing are the most widely used laser regeneration procedures.

Acne vulgaris is one of the most common skin conditions affecting about 9.4% of the global population. In addition, this skin condition affects about 80% of women and about 90% of men, young people are more prone to it.

The high prevalence of these skin conditions is expected to expand the laser resurfacing market. The high influence of media on aesthetic standards is expected to drive market growth. For example, as in an article published in BBC Future, photo-sharing activities, such as going through Instagram, or posting pictures on other social media platforms often increase physical inactivity. This, in turn, increases dissatisfaction with one's appearance, furthering the demand for cosmetic procedures.
