

Intraocular Lens Market Demand Grows With Rising Eye Disease Prevalence

*The Business Research Company's
Intraocular Lens Global Market Report
2022 – Market Size, Trends, And Global
Forecast 2022-2026*

LONDON, GREATER LONDON, UK,
March 29, 2022 /EINPresswire.com/ --
The rising prevalence of eye diseases is contributing to the growth of the intraocular lens market. Eye diseases such as macular degeneration, glaucoma, and cataracts, lead to vision problems. An intraocular lens is an artificial lens related to the eye. It replaces the eye's natural lens that has been removed during cataract surgery. According a 2020 survey, about 27.5 crore (275 million) Indians damaged their eyesight due to excessive screen time in the COVID-19 lockdown. By 2030, dry eye disease in India will affect nearly 40% of the urban population. Due to hectic lifestyles, cases of vision loss have been increasing globally. According to the intraocular lens market analysis, the rising prevalence of eye diseases will drive the market.

The global [intraocular lens market size](#) is expected to grow from \$4.14 billion in 2021 to \$4.39 billion in 2022 at a compound annual growth rate (CAGR) of 6.06%. The growth in the market is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The global intraocular lens market share is expected to reach \$5.47 billion in 2026 at a CAGR of 5.64%.
