Swisscom take steps to protect their subscribers from Smishing with the help of Openmind Networks

Openmind Networks are proud to announce they have helped Mobile Operator Swisscom protect their subscribers from SMS Phishing attacks which defraud subscribers.

DUBLIN, IRELAND, April 6, 2022 /EINPresswire.com/ -- Openmind, a specialist in mobile messaging security , have spent a number of years researching the threat posed by Fraud and Cyber attacks to the long term commercial viability of the SMS channel. The company predicted that SMS would need to be protected from fraud and abuse in order to maintain subscriber trust in the service and as a result have developed machine learning technology to tackle Smishing.

Openmind Networks has helped Swisscom protect their subscribers from Smishing

When the issue of Smishing began to ramp up across Europe in 2020 Swisscom turned to Openmind for a solution. Openmind have worked closely with Swisscom over the last number of months to implement and launch a Smishing Detection Service that secures subscribers from fraud while also adhering to stringent Swiss privacy regulations.

Swisscom use Openmind's Smishing Detection Service to detect and block Smishing messages on their network, protecting subscribers from the constant plague of fraudulent messages. The service has proved an immediate success, and in the first weeks of deployment has detected and blocked thousands of Smishing messages.

Openmind will support Swisscom by continuing to monitor and detect new SMS threats to Swisscom Subscribers, and evolve the service accordingly.
