The Global Brachytherapy Market and helps the market participants intensify their footprints in the industry. The report gives a detailed analysis concentrated on the critical market dynamics such as drivers, restraints, trends, and growth opportunities to assist businesses to prepare for

any challenges they might encounter in the forecast period. It also offers a regional analysis of the global Brachytherapy Market to explore possible growth prospects available in different parts of the world.

Research Methodology :

Data triangulation and market breakdown

Research assumptions Research data including primary and secondary data

Primary data includes breakdown of primaries and key industry insights

Secondary data includes key data from secondary sources

Some Key Highlights from the Report ;

Low-dose rate (LDR) brachytherapy is likely to grow at the fastest rate of x% in the forecast period. The radioactive sources, in LDR, are placed inside or directly beside the tumor and may be left in the target location permanently. Prostate cancer is the most commonly treated condition using Low dose rate brachytherapy.

Breast cancer is the most commonly occurring cancer type in women, with more than 2 million new breast cancer cases in 2018. The global breast cancer survival rates vary greatly, ranging from around 80% in North America, Japan, and Sweden to nearby 60% in middle-income nations and lower than 40% in low-income nations.

Specialty clinics are equipped with the requisite radiotherapy instrument & devices and specialist staff to assist in diagnosing cancer and adopting a suitable procedure for disease treatment.

The brachytherapy market in the Asia Pacific region is likely to grow at the fastest rate of 5.6% in the forecast period due to the growing incidence and occurrence of cancer, the increasing prevalence of health insurance, and improving reimbursement policies.
