Technological advancements have resulted in development of more innovative surgical devices with improved treatment outcomes. In addition, rapid integration of surgical robots with bariatric equipment is supporting market growth, and the trend is expected to continue going ahead. Increasing need for bariatric surgeries have created rising demand for skilled professionals. Availability of specialized surgeons for bariatric surgeries is having a positive impact on the market. Favorable government initiatives for research programs to treat obesity and provide insurance coverage for treatments is opening up major growth opportunities in the market.

Gastric bypass surgery helps loose weight by changing how stomach and small intestine handles food. After surgery, the stomach will be smaller, and patient will feel full with less food consumption. This procedure is performed on patients who are seriously obese and have been unable to achieve desired weight loss through diets.

minimally invasive surgeries enable completion of weight loss surgery without need for making a large, open incision. There are various types of minimally invasive surgeries such as single-site weight loss surgery, laparoscopic weight loss surgery, robotic weight loss surgery, and endoscopic techniques.
