The global forage market reached a value of US\$ XX Billion in 2021. Looking forward, IMARC Group expects the market to grow at a CAGR of XX% during 2022-2027.

SHERIDAN, WYOMING, USA, April 8, 2022 /EINPresswire.com/ -- Forage is the part of crops fed directly to livestock and largely contributes to the world of food production. It is a rich source of vitamins, fibers and proteins.

The consumption of forage also enhances milk production, maintains rumen health, increases metabolism, improves eggshell formation, provides fluid balance, and hormone production among various animals and poultry birds. In addition to this, forage reduces the development of weeds, prevents soil erosion, helps in sediment displacement, purifies the air and water, mitigates greenhouse gas impact, and nourishes wildlife habitats.

Nowadays, the lack of proper wildlife management has led to the shrinkage of grazing land, which is escalating the product demand across the globe. Moreover, farmers nowadays increasingly prefer organic forage as it offers adequate nutrition to animals.

Furthermore, extensive investments in research and development (R&D) activities to improve product quality are expected to significantly impact the market growth in the upcoming years.

Note: We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.
