Immunoglobulins, also known as antibodies, are glycoprotein molecules formed by plasma cells or white blood cells (WBCs). They help identify and bind foreign antigens, such as viruses or bacteria and prevent the spread of infections to other parts of the body. As a result, they are used in the treatment of various neurological and immunological diseases worldwide.

Note: We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.
