Some Key Highlights From the Report :

Androgenetic alopecia is likely to grow at the fastest rate in the period 2020-2027. It is a commonly occurring hair loss in the global population. In the case of men, it is also referred to as male-pattern baldness.

Alopecia totalis causes total hair loss on the scalp and is considered an advanced form of alopecia areata responsible for round hair loss patches.

PCO (Polycystic Ovary Syndrome) is responsible for androgenic alopecia in females worldwide with an anticipated 20.0% of females witnessing the condition before menopause and around 40.0% post-menopause.

The OTC (over-the-counter) availability of alopecia treatment drugs is fueled by rising focus to provide easy therapeutic accessibility and the necessity for affordable treatment.

The market in the Asia Pacific region is projected to grow at the fastest rate of 10.0% in the forecast period attributed to increasing incidence of chronic disorders, growing awareness among the population, especially in people of the young generation, and a rise in the level of disposable income.
