Information and communications technology (ICT) refers to the unified communications and integration of telecommunications and computers. ICT is the infrastructure and components that enable modern computing and the technology is used to efficiently handle communications processes such as broadcast media, telecommunications, audiovisual processing and transmission systems, and network-based control and monitoring functions. Rapid advancements in big data and machine learning has contributed to significant progress of the

ICT industry. Integration of cloud-computing, availability of large number of mobile apps, rapid automation across the numerous end-use industries, and advancements in artificial intelligence are some key factors expected to drive market revenue growth over the forecast period. The advent of Internet of Things (IoT), increasing research and development activities, and development of robust business intelligence tools are some other factors contributing to market growth.

The report offers extensive analysis of the key drivers, challenges, limitations, and current and emerging trends of the market. The report also provides strategic recommendations and insights for new entrants to propel their entry into the market and overcome entry-level barriers and thereby contribute to revenue growth of the market. The competitive landscape segment further offers key insights into mergers and acquisitions, collaborations, partnerships, agreements, corporate deals, and brand promotions among others. The report also provides deeper insights into the workings and product portfolio of each market player to help clients better understand the market competition.

Key companies profiled in the report include:
