

Green Building Materials Market Report 2022-2027, Industry Size, Share, Trends and Forecast

SHERIDAN, WYOMING, UNITED STATES, April 18, 2022 /EINPresswire.com/ -- The latest research study, "[Green Building Materials Market Report: Global Industry Trends, Share, Size, Growth, Opportunity and Forecast 2022-2027](#)" has been added by IMARC Group. The global green building materials market size reached US\$ 280.5 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 523.7 Billion by 2027, exhibiting at a CAGR of 11.06% during 2022-2027.

Green building materials serve as eco-friendly alternatives to conventionally used construction materials. Wood, straw bales, bamboo, hempcrete, [recycled plastic](#), ferrock, stone, ashcrete, timbercrete and mycelium

are some of the most commonly used green building materials. The aim of using these materials is to construct energy-efficient structures that aid in maintaining the ecological balance in nature. These materials are either naturally available, such as stone and wood, or are derived from natural resources, such as hempcrete, which is a concrete-like material produced from the woody inner fibers of the hemp plant.

Global Green Building Materials Market Trends:

A thriving construction industry across the globe, especially in emerging economies, is one of the

Green Building Materials Market Share

major factors that is influencing the sales of these materials. Owing to the rising awareness about the deteriorating environmental conditions among the masses, there has been an increase in the construction of green buildings across both residential and commercial sectors as people are now more inclined toward a sustainable way of living. Additionally, the abundant and easy availability of essential green building materials such as thatch, mud and clay significantly reduces the overall operational and maintenance cost of these buildings.

Moreover, since green buildings aid in addressing various environmental issues such as atmospheric pollution and changing climatic conditions, governments of several countries are introducing policies and undertaking initiatives to encourage their construction. For instance, the Government of the United Kingdom has adopted the Building Research Establishment Environmental Assessment Method (BREEAM) rating system for green buildings. Such rating and certification systems are expected to promote the benefits of green construction, thus creating a positive outlook for the market.

Note: We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Global Green Building Materials Market 2022-2027 Analysis and Segmentation:

Competitive Landscape:

The competitive landscape of the market has been studied in the report with the detailed profiles of the key players operating in the market.

Some of the major players operating in the market being Alumasc Group Plc, Bauder Limited, Binderholz GmbH, CertainTeed Corporation; RedBuilt, LLC; PPG Industries, DuPont, Forbo International SA, Interface Inc., Kingspan Group plc, Lafarge, BASF SE, Owens Corning and National Fiber.

About Us

IMARC Group is a leading market research company that offers management strategy and market research worldwide. We partner with clients in all sectors and regions to identify their highest-value opportunities, address their most critical challenges, and transform their businesses.

IMARC's information products include major market, scientific, economic and technological developments for business leaders in pharmaceutical, industrial, and high technology organizations. Market forecasts and industry analysis for biotechnology, advanced materials, pharmaceuticals, food and beverage, travel and tourism, nanotechnology and novel processing methods are at the top of the company's expertise.
