Looking forward, IMARC Group expects the market to reach US\$ 64.59 Billion by 2027, exhibiting at a CAGR of 4.5% during 2022-2027.

Analgesics Market

Analgesics, or painkillers, are drugs that are generally prescribed to relieve pain. They are of three types: non-opioids, opioids, and compound analgesics. Commonly having no side effects, they are used for treating pain resulting from surgeries, inflammation, phantom aches, neuropathic conditions, and cancer treatments. Some of the commonly available analgesics are paracetamol, morphine and oxycodone.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Global Analgesics Market Trends:

The global analgesics market is primarily driven by the rising incidences of chronic disorders, including arthritis, heart disease and cancer. Coupled with the growing geriatric population across the globe, there has been a considerable rise in the sales of analgesics. In line with this, the availability of well-established healthcare facilities and easy home deliveries by e-commerce platforms are also providing an impetus to the market growth. Apart from this, continual product innovations, the manufacturing of safer opioids with improved side effects, and continual

research and development (R&D) activities conducted by key players are creating a positive outlook for the market.
