

Expanding Briggs Home Care engages StackCare passive monitoring technology

StackCare passive monitoring technology to enhance Briggs Home Care and provide peace of mind with ongoing caregiver labor shortage

HAYMARKET, VIRGINIA, UNITED STATES, May 9, 2022 /EINPresswire.com/ -- The number of Americans age 65 and up is growing at a faster rate than the total U.S. population and the need for quality home care services will continue to grow along with them. With over 75 years as a proactive healthcare industry leader, [Briggs Healthcare](#) understands the importance of preparation when meeting client needs within an ever-changing health landscape and has been meeting those needs through its [Briggs Home Care](#) subsidiary via multiple corporate-owned home care agencies across the United States.

As Briggs expands its home care organization rolling out franchise opportunities in major urban areas they recognized that the current caregiver shortage is actually here to stay and that technology needs to play a role. Enter [StackCare](#).

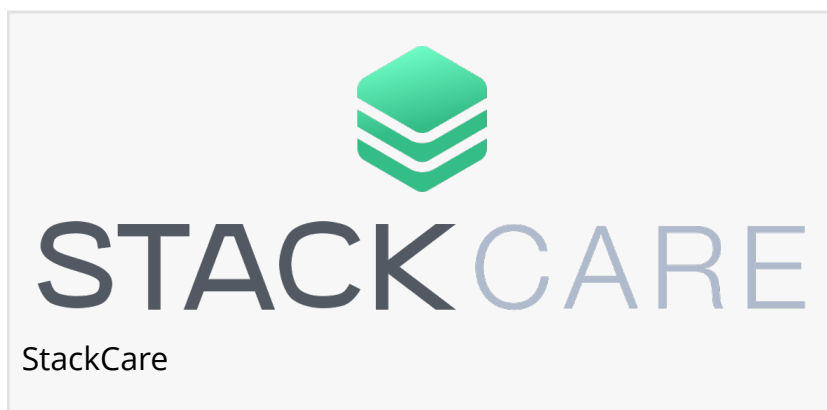

Sybll Romley - Corporate Executive Director, Briggs Home Care

StackCare uses discreet, non-invasive motion sensors checking for activity over 80,000 times per day in a typical home. Looking at individual behavior and activity patterns the StackCare app sends a notification directly to chosen recipients that easily identifies what has changed and if

action is needed. StackCare which looks for potential falls, changes in activity levels, odd sleep patterns, unusual amounts of time spent in the bathroom, unsafe temperatures, and skipping meals, also includes help buttons which may be pressed at anytime to alert family members or a caregiver.

Briggs Home Care agencies are able to use the StackCare web-based portal for monitoring and analytics across multiple clients simultaneously while family members receive notifications only for their individual loved ones. Supporting Briggs Home Care high satisfaction ratings, StackCare's passive monitoring utilizes small infra-red motion detectors without using cameras or microphones and requires nothing of the senior adult except to live their life as usual.

“

As the ratio of older to younger Americans becomes greater, successful Home Care providers must embrace technology. With StackCare we help our clients stay safe at home, even when we are not there.”

Sybil Romley - Exec Dir. Briggs Home Care

About StackCare

StackCare is a remote passive monitoring system which uses sophisticated AI and data science to analyze multiple motion sensors and contact sensors simultaneously to highlight unusual behavior or activity patterns in older adults that may indicate developing health issues or a fall, sending out notifications in real time to caregivers via both mobile app and web portal. StackCare partners nationwide with recognized home care providers and with numerous senior living communities.
