An electric wheelchair is utilized as a means of locomotion for non-ambulatory individuals. Also known as a motorized wheelchair, it is mainly driven by electrical power sources, such as sealed lead-acid (SLA) batteries. It has a backrest, headrest, contoured foams, air-filled bladders and cushions made of gels to provide comfort. It also has a joystick or switches, which allow the users to control the acceleration and movements.

Market Trends

The increasing instances of neurological disorders, coupled with the growing geriatric population, which is more prone to orthopedic conditions, represents one of the key factors bolstering the electric wheelchair market growth. Apart from this, technological innovations, including voluntary movements like tongue and head movement, lower extremity control and breath actuation, are acting as another growth-inducing factor. Furthermore, the surging cases of the coronavirus disease (COVID-19) and rising hospitalization of individuals are anticipated to positively influence the demand for electric wheelchairs around the world.
