The report also includes competitor and regional analysis, and contemporary advancements in the market.

Fertilizer Market

The global [fertilizer market size](#) reached a value of US\$ 163.2 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 203.5 Billion by 2027, exhibiting a CAGR of 3.9% during 2022-2027. Fertilizer is a chemical substance used on crops to increase the water retention capacity and natural fertility of the soil. It also aids in destroying pathogenic components and preventing the spread of diseases to plants. Moreover, it contains essential nutrients and microbes, such as potassium, phosphorus, and nitrogen, which are needed for efficient plant growth.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

## Strategies of major players and product offerings

### Global Fertilizer Market Trends:

The rising global population, declining arable land, and the escalating demand for sustainable food production are positively influencing the utilization of fertilizers to improve crop productivity. Besides this, the introduction of organic fertilizers is contributing to the market growth. Furthermore, various government and non-government organizations (NGOs) are introducing awareness programs and customized rural workshops to educate farmers about the usage and benefits of fertilizers in crop production. This, coupled with the rising demand for water-soluble and N, P, K, and micronutrient fertilizers that support human health, is anticipated to propel the growth of the market.
