Moreover, the inflating adoption of gene therapy for the treatment of hemoglobinopathies at affordable costs is acting as another significant growth-inducing factor. In line with this, the launch of various favorable policies by government bodies across countries to introduce novel therapies and the growing healthcare sector are also augmenting the global market.

Additionally, the increasing investments in R&D activities to develop CRISPR-Cas9 technology by adding, editing, removing, altering, and modifying the DNA are anticipated to fuel the hemoglobinopathies market over the forecasted period.

Note: We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.
