

Foxx Life Sciences and Thomas Scientific Join Forces to Simplify Media Bottle Ordering

Leading Single-Use Systems manufacturer forms unique distribution channel with Thomas Scientific to provide customizable media bottle assemblies.

SWEDESBORO, NEW JERSEY, UNITED STATES OF AMERICA, May 3, 2022 /EINPresswire.com/ -- Foxx Life Sciences, a leading manufacturer of biotech, pharmaceutical, and diagnostics products, has entered into an online distribution agreement with Thomas Scientific for the sale of their EZBio® Made To Order Media Bottle Assemblies (EZBio® MTO). The products will be made available for customization and ordering via a [direct-to-consumer microsite](#) hosted on the Thomas Scientific website, ThomasSci.com.

An example of the Made-To-Order Media Bottle Assemblies that can be customized through the new Thomas Scientific/Foxx Life Sciences microsite

Launched in February 2021 and previously only available through the [Foxx website](#), the EZBio®

“

This partnership with Foxx gives Thomas the ability to offer fast, flexible, single use solutions to all our customers.”

Michael Klipstein, Thomas Scientific Chief Commercial Officer

MTO service allows customers to select individual laboratory media bottle assembly components best suited to their project needs. Selectable components include the volume and material of bottle, brand of TPE tubing, and type of fitting.

Thomas Scientific customers can now gain access to the EZBio® service and product portfolio through the unique dedicated microsite. In contrast to traditional media bottle assembly ordering, the microsite’s customization provides users with increased flexibility, while cutting down

significantly on lead time.

“The Foxx Thomas EZBio® MTO program is an SUT end user game changer,” asserted Foxx Life

Sciences President/CEO Thomas Taylor. "A few simple clicks and you have exactly what you are looking for with your tubing, your connectors, etc. Foxx was the first in the world to create this SUT MTO program."

Available in Polyethylene Terephthalate Glycol-modified (PETG) and Polycarbonate (PC), EZBio® MTO assemblies are ideal for bioprocess storage and sterile fluid transfers that typically require regulation. Customers can use the microsite's component selectors to choose from over 400 different combinations in just seconds, rather than dragging out sterile assembly development in the usual way. This cuts down the standard 8-10 week lead time to just 4-6 in most instances.

The EZBio® MTO microsite is a solid addition to a Foxx Life Sciences/Thomas Scientific portfolio that contains over 200 SKUs. It provides Foxx with added exposure to thousands more existing Thomas Scientific customers from a variety of applicable markets, including biopharma, diagnostics, life sciences, and cannabis.

The agreement also aligns seamlessly with Thomas Scientific's aim to provide solutions for the full scope of laboratory, controlled environment, and production workflows. In this instance, customers will enjoy a hands-on, customizable ordering experience, while benefiting from direct access to more of the EZBio® MTO product portfolio that Foxx has made available through Thomas.

Thomas Scientific Chief Commercial Officer Michael Klipstein further lauded the merits of the partnership: "This partnership with Foxx gives Thomas the ability to offer fast, flexible, single use solutions to all our customers. It significantly broadens our ability to support them in their manufacturing suites."
