

# How to Clean Out a Storage Unit

MENASHA, WISCONSIN, UNITED STATES OF AMERICA, April 28, 2022 /EINPresswire.com/ -- Those with a storage unit overflowing with old items, broken furniture, and more may find it overwhelming to even think about cleaning it out. But, if move-out time is right around the corner, or if they want to get organized, this blog post will go over the ways to get a unit clean efficiently!

## 1. Start By Emptying the Entire Unit on the Floor

The first step is to take everything out of the unit and put it on the floor. This way, one can see everything they have and sort through it. At first, all of the items on the floor will look

overwhelming, but if they continue following the steps in this article, they will have an easy time cleaning out their unit.

## 2. Sort Through Everything and Discard Anything Not Needed

Now that everything is on the floor, it is time to start sorting. This means going through every item and deciding if it is something that will be needed in the future. If not, then it can be discarded. Once again, this process may seem daunting, but it will be done if they take it one step at a time.

## 3. Use Boxes, Bags, or Furniture to Create Separate Piles for Each Type of Item

After everything has been sorted, it is time to start creating piles. This can be done by using boxes, bags, or even furniture if necessary. The point is to have a designated spot for each type of item. For example, one pile could be for clothes, another for books, and another for broken things that need to be thrown away. This step will make the next one much easier.

#### 4. Take Inventory of Each Pile and Create a Plan for Getting Rid of What is Not Wanted

Now that everything is sorted into piles, it is time to take inventory. This means going through each pile and deciding what will be kept and what needs to be removed. For items that need to be thrown away, a plan should be made for how to do so. This could include renting a dumpster or taking multiple trips to the dump. For items that are still usable, a plan should be made for what to do with them. This could include donating them or selling them.

#### 5. Label Each Box or Bag With its Contents and the Date That it Was Packed

After everything has been sorted, and a plan has been made for getting rid of the unwanted items, it is time to start packing everything up. This step is crucial because it will make it easier to find things in the future. Each box or bag should be labeled with its contents and the date it was packed. This way, if something is needed, it can easily be located.

#### 6. Store What is Left

The final step is to store everything in a way that makes sense. This could mean putting all of the boxes on one side and all of the furniture on the other. It could also mean grouping items together by type. For example, all clothes could be stored in one spot and all of the books in another. The important thing is to find a system that works and stick to it.

By following these steps, anyone can easily clean out their storage unit. While it may seem like a daunting task at first, if they take it one step at a time, they will be done before they know it!

Looking for a junk removal company to assist in a storage unit cleanout? Truck N Junk can take care of the mess. Call their team today at 920-858-1455 or visit their website <https://trucknjunk.com/> to book an appointment today.
