

AV-Comparatives Releases Performance Test Report Showing the Impact of Security Software on System Performance

The Independent ISO-Certified Security Testing Lab's Impact of Consumer Security Software on System Performance Results Released

INNSBRUCK, TYROL, AUSTRIA, May 3, 2022 /EINPresswire.com/ -- [AV-Comparatives](#), the independent ISO-certified security software evaluation lab, has released results for the April 2022 [Performance Test](#), which evaluates the impact of anti-virus software on system performance. As anti-virus software programs run in the background and use system resources, AV-Comparatives helps users evaluate their anti-virus protection in terms of system speed and performance. This independent testing lab is dedicated to informing users about protection against cybercrime with its systematic testing of the market's most popular security software solutions. The company creates a real-world environment for accurate testing by utilizing common use case scenarios.

“

Please keep in mind, security is more important than speed.”

Andreas Clementi, founder and CEO, AV-Comparatives

Mark 10 Professional Testing Suite.

The products evaluated by AV-Comparatives for its performance test include:

Avast Free Antivirus, AVG Free Antivirus, Avira Prime, Bitdefender Internet Security, ESET Internet

Security, G Data Total Security, K7 Total Security, Kaspersky Internet Security, Malwarebytes Premium, McAfee Total Protection, Microsoft Defender, NortonLifeLock North 360 Deluxe, Panda Free Antivirus, TotalAV Antivirus Pro, Total Defense Essential Antivirus, Trend Micro Internet Security and VIPRE Advanced Security.

AV-Comparatives carried out its spring performance test on a machine with an Intel Core i3 CPU, 4GB of RAM and SSD hard disks. AV-Comparatives considers this machine configuration as “low-end”. The performance tests were done on a clean Windows 10 21H2 64-Bit system (English) and then with the installed consumer security software (with default settings). The tests were done with an active Internet connection to allow for the real-world impact of cloud services/features. In autumn a high-end machine will be used for this test.

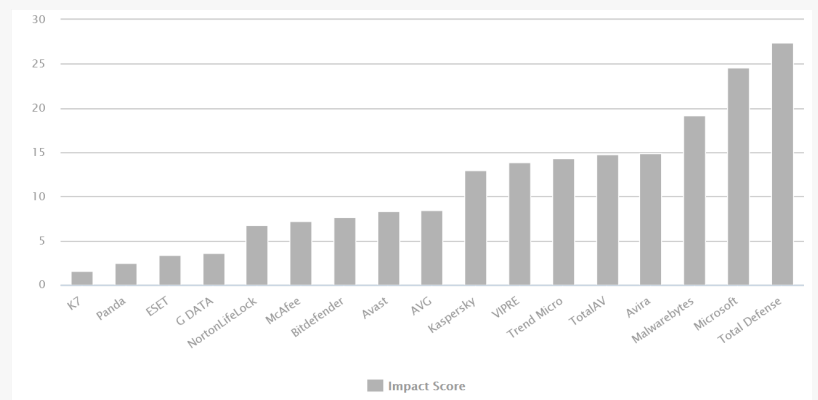

Of the 17 security products tested, nine were awarded the highest level, Advanced+, including: K7, Panda, ESET, G Data, NortonLifeLock, McAfee, Bitdefender, Avast, AVG. Six products were awarded the second highest level of Advanced, including Kaspersky, VIPRE, Trend Micro, TotalAV, Avira and Malwarebytes. Microsoft and Total Defense received the Standard award.

“We hope that with these tests we can keep users and vendors engaged in system security, and mitigating the ever-evolving threat landscape,” said Andreas Clementi, founder of AV-Comparatives. “For these solutions to continue to grow and evolve, tests like these are extremely important to provide accuracy and accountability.”

Like all AV-Comparatives’ public test reports, the April 2022 Performance Test Results are

Avast Free Antivirus 22.3	McAfee Total Protection 25.5
AVG Free Antivirus 22.3	Microsoft Defender 4.18
Avira Prime 1.1	NortonLifeLock Norton 360 Deluxe 22.22
Bitdefender Internet Security 26.0	Panda Free Antivirus 21.01
ESET Internet Security 15.1	Total Defense Essential Antivirus 13.0
G Data Total Security 25.5	TotalAV Antivirus Pro 5.16
K7 Total Security 16.0	Trend Micro Internet Security 17.7
Kaspersky Internet Security 21.3	VIPRE Advanced Security 11.0
Malwarebytes Premium 4.5

About AV-Comparatives

AV-Comparatives is an independent organisation offering systematic testing to examine the efficacy of security software products and mobile security solutions. Using one of the largest sample collection systems worldwide, it has created a real-world environment for truly accurate testing.

AV-Comparatives offers freely accessible av-test results to individuals, news organisations and scientific institutions.

Certification by AV-Comparatives provides a globally recognised official seal of approval for software performance.
